#### Project details

Project name	Daniel Department Store Phase 2 Redevelopment Peascod Street Windsor
Short description of the project	Between March and May 2011, Oxford Archaeology (OA) carried out an archaeological watching brief during the Phase 2 development of the Daniel Department Store, Peascod Street, Windsor, Berkshire (NGR: SU 9677 7677). The work was commissioned by W J Daniel and Company Ltd in advance of the redevelopment of an existing store. The watching brief revealed evidence of extensive truncation of the southern third of the site by modern intrusions, together with post-medieval cellarage along the Peascod Street front of the site. Remains of the structures recorded on the 19th and 20th century OS maps were also observed together with two associated brick-lined wells. Evidence for probable late medieval or early post-medieval occupation of the site was observed in the form of demolition debris and residual finds. No evidence for any deposits, features or structures predating the 15th century was observed.
Project dates	Start: 15-02-2011 End: 14-03-2011
Previous/future work	Yes / No
Any associated project reference codes	REDMG:2009.177 - Museum accession ID

*Version date. 5/1/12 POT/CBM*

## **Assessment of the pottery from Daniel's Department Store, Windsor (WIDAST 11)**

*by John Cotter*

### ***Introduction and methodology***

A total of 27 sherds of pottery weighing 1001g. were recovered from four contexts. The pottery was examined and spot-dated during the present assessment stage. For each context the total pottery sherd count and weight were recorded on an Excel spreadsheet, followed by the context spot-date which is the date-bracket during which the latest pottery types in the context are estimated to have been produced or were in general circulation. Comments on the presence of datable types were also recorded, usually with mention of vessel form (jugs, bowls etc.) and any other attributes worthy of note (eg. decoration etc.).

### ***Date and nature of the assemblage***

The assemblage is in a fresh though fragmentary condition. Apart from one late medieval sherd all the pottery is of post-medieval date. The earliest piece (ctx 117) is a large fresh jar rim in white-firing Coarse Border ware from the Surrey/Hampshire border. This has a diameter of 190mm. and a short piece of attached strap-handle with characteristic stabbed and incised decoration which, together with its globular form, identify the vessel as a probable cistern for brewing and storing ale or beer. These have a full date range of c 1350-1525 but are most typical of the 15th and early 16th centuries (Pearce and Vince 1988). Contexts (116) and (107) produced a few fresh body sherds from late 16th- or 17th-century local glazed redwares and Surrey Border whiteware, although (107) also produced a fragment of a 19th-century water-closet (post- c 1850). The assemblage of 19 large fresh sherds from Context (124) contains Staffordshire-type transfer-printed Pearlware tableware forms and a brown English stoneware ink bottle allowing an unusually narrow deposition date of c 1820-1830/40 to be suggested. Fuller details may be consulted in the spreadsheet. No further work is recommended.

### **The Clay pipe**

*by John Cotter*

A single piece of clay pipe stem (1g.) was recovered from Context (124). This is in a fresh condition. Its narrowness and narrow stem bore suggest a 19th-century date. No further work is recommended.

### **The ceramic building material (CBM)**

*by John Cotter*

The CBM assemblage comprises 20 pieces weighing 4361g. These came from four contexts. These have been recorded on an Excel spreadsheet in a similar way to the pottery (see above). The assemblage consists almost entirely of large fresh peg tile (roofing tile) fragments and one fragment of ridge tile. Although medieval and post-medieval peg tiles cannot generally be closely dated, the good preservation of some of the examples here allows a dating within a century or two to be suggested on the basis of intrinsic characteristics. However association with more closely-datable pottery from the same contexts has also been useful in dating the CBM. This broadly confirms the CBM dating but is not the over-riding factor in the dating suggested here. Much of the tile assemblage here is probably late medieval or 'Tudor' in date (broadly 15th-17th century) and only Context (142) produced tiles with later, probably 18th-19th century, characteristics.

The earlier tiles - which are in the majority here - are of typical rectangular form with a pair of circular nailholes near the upper end. These are all handmade with many slight irregularities and handling marks - particularly along the edges. They all occur in a smooth or finely sandy orange or orange-brown fabric (see descriptions in spreadsheet) which may be made from the local London Clay. A thickness of 13-15mm. is typical. A complete late medieval or early Tudor peg tile from Context (117) is notable as complete tiles of this date - with associated pottery dating - are fairly rare. The tile has a length of 280mm., a width of 167mm. and a thickness of 14-18mm. (average c 15mm.). This has a pair of circular nailholes, crudely punched-through the upper end. One of the nailholes appears to have been

imperfectly perforated during manufacture but the small c 5mm. hole subsequently punched-through after firing was probably sufficient to take a narrow iron nail (but not a wooden peg). These 'blind' nailholes have been observed on other medieval tiles in the Thames Valley. The complete tile is associated with a large fresh sherd from a Coarse Border ware jar datable, most probably, to the 15th or early 16th century. Tiles from other contexts are mostly of 16th-17th century appearance but still mostly very similar to the complete tile. A single piece of plain curved post-medieval ridge tile occurred in Context (142). Fuller details may be consulted in the spreadsheet. No further work is recommended although it is strongly recommended that all the CBM should be retained for future reference.

### **Mortar**

*by John Cotter*

A single piece of building mortar (180g.) was recovered from Context (142). The piece is sub-triangular in shape and unusually thick and slab-like (20mm thick), although its flattened edges appear to be accidental. In composition it is very hard or dense with a very sandy texture and is pale grey in colour. The outer surface is smoothed and flat white the inner (broken) surface is very irregular and has traces of soft red brick embedded in it. A date in the 18th or 19th century might be suggested. No further work is recommended.

### **Bibliography**

Pearce, J.E. and Vince, A.G. 1988, *A dated type-series of London medieval pottery, Part 4: Surrey Whitewares*, London Middlesex Archaeol Soc, Special Paper 10.

Context	Spot-date	No.	Weight	Comments
107	c1850-1900+	5	99	1x Yellow ware flange from the rim of a 19C water closet with broad white slip band internally. Rest of the pottery is fresh and prob 17C incl 2x green-glazed Border ware (1 vess) & 2x bss post-med redwares (PMR)
116	c1550-1750?	2	37	Fresh bss PMR or red Border ware in similar fabric incl larger ?jug bs with splash of green glaze
117	c1350-1525	1	145	Fresh rim and shoulder from a Coarse Border ware jar - probably a cistern - with globular body, short cylindrical rim and short squared/flanged rim (di 190mm/22%). Stub of strap-handle attached to neck with typical CBW stabs or pricks and a pair of incised parallel lines running down centre of handle. Coarse unglazed fabric except for speck of purplish glz on rim. Prob 15th/early 16th century?
124	c1820-1830/40	19	720	2x vess in blue transfer-printed Pearlware incl large footring bowl and small cylindrical jar with lid-seating (mustard pot etc), both with Chinese-style scenes. 1x rim late Chinese porcelain dish w blue handpainted dec. Brown salt-glz ink bottle (c1815+). Bs Yellow ware. Bs German selter water bottle (grey fabric). Bs late Notts stoneware. PMR/late red Border ware incl flanged dish rim. All large fresh sherds
<b>TOTAL</b>		<b>27</b>	<b>1001</b>	

Context	Spot-date	No.	Weight	Comments
107	16-17C?	6	824	Fresh peg tile frags in smooth orange fabric similar to those in (117) but slightly more fine voids caused by dissolved ?chalk, Thickness 13-15mm. 1 smaller frag in coarser sandier medieval-looking fabric 15mm thick & sandier underside. 1x thinner corner frag 11-13m thick w over-fired darker red-brown fabric with more surface voids & grey ash glaze along edges. Only 1 with trace circular nailhole
116	L16-17C?	5	1269	Large fresh peg tile frags in orange smooth and sl sandy fabrics. Sl irreg manufacture. Some sanded underside. 13-16mm thicknesses typical. Leaf impression in one. Trace circ nailhole in one
117	15-17C?	1	1278	Complete 'medieval' peg tile. Length 280mm, Width 167mm, Thickness 14-18mm (average 15mm). Pair of fairly crude circular nailholes punched-through from upper surface, c16 & 18mm diam & c 61mm apart (centre-centre), exit bumps on underside. The left nailhole is only c5mm across on the inside and may have been made 'blind' - for use with an iron nail? The other nailhole is fully open. Black staining on lower int third and faint white ?mortar stains in same position ext plus general weathering show the tile was used. Also quite weathered and pitted in upper 60mm ext. Fairly smooth or v finely sandy orange-brown fabric with crude handling marks along edges and lower ext. Sides squared but slightly irreg. Few visible inclusions except v rare limestone/chalk to 8mm. Mostly fine red, brown and clear quartz sand, rare fine flint. Creased/crinkled lower int end area during manufacture. Int spalling near top. Fabric & irregularity suggest 'Tudor' date. KEEP/PHOTO

Context	Spot-date	No.	Weight	Comments
117	15-17C?	3	470	Frag 3 separate peg tiles in similar but denser more post-med looking fabric to complete tile above. All hard, dense and more orange than orange-brown but v similar in terms of manufacture, thickness etc. Smaller corner frag 13-16mm thick with grey fritty ash glaze on edges. Fresh large corner frag 185mm, long 13mm thick - clean dense fabric w rare ?chalk incls to 8mm, v large 20mm wide organic void caused by burnt-out wood chip, v fine elongated or elliptical voids in fabric of all tiles - poss burnt-out organic matter (from London Clay?). Sep bs 12-14mm thick
142	18-19C?	5	520	4x flat peg tile frags, 1x curved plain orange sandy ridge tile frag - post-med. More varied fabrics than above incl poss 16/17C tiles & thinner (to 11mm) dense pale orange marl-streaked tile frag & another softer sandier tile - 18/19C
<b>TOTAL</b>		<b>20</b>	<b>4361</b>
