**Andover Road,  
Winchester,  
Hampshire**

NGR SU 4779 3037

**Written Scheme of Investigation for  
an Archaeological Watching Brief**

## **1 Introduction**

- 1.1 Carillion Civil Engineering Plc appointed Oxford Archaeology (OA) to conduct a Watching Brief at Andover Road, Winchester, to observe the topsoil strip of two areas of development.
- 1.2 Because of the presence of known sites of archaeological interest within the immediate vicinity of these works a condition requiring that an archaeological watching brief be undertaken during all groundworks has been attached to the consent. This is in line with PPG16 and Policy HE.1 of the Winchester District Local Plan (2006).
- 1.3 This Written Scheme of Investigation details how Oxford Archaeology (OA) will implement the requirements of a Watching Brief. The first part is site specific while the appendices detail general OA standards and procedures.

## **2 Geology and Topography**

- 2.1 Winchester is located at the southern edge of the chalk Downs of Wessex, where the valley of the River Itchen cuts southward through the western end of the South Downs.
- 2.2 The site is located within the northern half of the City of Winchester adjacent to the B3041. The development area is situated either side of the Winchester to Basingstoke railway line. The site lies within the area of Winchester known as "Lankhills".
- 2.3 The development area is sited at approximately 64 m above OD and the underlying geology is Upper Cretaceous Chalk (British Geological Survey sheet no. 299). The site is currently undeveloped scrubland.

## **3 Background**

- 3.1 The Roman city of Winchester, Venta Belgarum, was established on a site that had been occupied from at least the middle Iron Age. Evidence has been found for settlement dating from the 3rd century BC onward extending over a large area of the western side of the Itchen Valley, as well as at the hillfort at St

Catharine's Hill on the eastern side. The latter site was abandoned c 100 BC, but occupation continued on the western side of the valley, with the construction during the Middle Iron Age of Oram's Arbour, a ditched enclosure encompassing an area of some 20 hectares situated approximately 1km to the west of Lankhills, although by the Late Iron Age this too was in decline and possibly disused.

- 3.2 Venta Belgarum appears to have begun around AD 50 as an unenclosed settlement on the west bank of the River Itchen. This early phase of occupation is poorly understood, and although evidence has been claimed for a street layout in and outside the north-western corner of the later walled city on a different alignment to the rest of the street grid.
- 3.3 The town must have owed its origins to the presence of pre-existing routeways converging on a crossing point of the river, and to the significance the area had gained from the proximity of Oram's Arbour, regardless of whether the latter enclosure was occupied down to this time. The question of whether or not the town saw a phase of early military activity has been widely debated.
- 3.4 The settlement was transformed by a major programme of public works started in the Flavian period, including the construction of earth and timber defences enclosing the north, south and west sides, and a large public building believed to be the forum, which has been investigated in excavations at the Wessex Hotel and Cathedral Green.
- 3.5 The character of the city changed significantly shortly after AD 350: the town houses went out of use and deposits of 'dark earth' developed across parts of the occupied area. However, these changes do not appear to represent abandonment as much as a change in the nature of occupation. The area of occupation, as reflected in the distribution of pottery and coins, actually seems to have increased at this time to incorporate the previously little used western part of the city, evidence for metalworking increased, as did the size of the city's cemeteries, and at some point during the second half of the 4th century bastions were added to the city wall. These changes are difficult to interpret, but perhaps the role of the city changed from being principally an administrative centre to a densely occupied industrial centre, or a defended centre for the collection and storage of taxation in kind. The demise of the city may have occurred quite swiftly at the end of the 4th century or shortly after, when all evidence for occupation is thought to have ceased, reflected most notably in the apparently abrupt cessation of burial in the city's cemeteries.

### **The cemeteries of Venta Belgarum**

- 3.6 Roman law forbade burial within urban areas, for reasons of hygiene and religion, and consequently cities were typically surrounded by a ring of cemeteries. The cemeteries of Venta Belgarum are currently only poorly understood, but areas of burial have been identified to the north, west, south-west and east of the city, broadly alongside the main roads leading into it.

- 3.7 The location of the Roman cemeteries outside the town has meant that they remained beyond the limits of Winchester throughout most of the historic period, and it is only with the development of the city's suburbs during the 19th and 20th centuries that they have been built on.
- 3.8 The northern cemetery, within which Lankhills is situated, extends for c 450 m along the road to Cirencester (now the B3420/B3041), from the fork at which it separated from the Silchester road just outside the city's north gate as far as the site of Lankhills School. The burials lie mostly to the east of the road, with graves only recorded on the western side at Victoria Road and Andover Road and possibly at the site of the former Winchester Cattle Market, now a municipal car park immediately south of Lankhills School (Clarke 1979).
- 3.9 A small number of isolated graves have also been discovered further east, in the vicinity of the Silchester road, but these do not appear to form part of the cemetery and may be the burials of rural settlements or of wealthy individuals who chose to be buried separately. The cemetery appears to have originated as a much smaller area, located in the triangle formed by the junction of the Cirencester and Silchester roads, and to have been extended to the north over time as a larger area became necessary, particularly after the adoption of inhumation as the dominant burial rite during the latter part of the Roman period. The rate of expansion of the cemetery is difficult to gauge as the conditions under which many of the observations were made did not allow sufficient detail to be recorded to provide an accurate date, but by the 4th century, when burial started at Lankhills School, the cemetery may have been continuous along the length of the road. It was also at this time that a secondary area of burial seems to have been opened to the west of the southern end of the Cirencester road, parts of which have been uncovered at Victoria Road and the Eagle Hotel site (Teague 1999; Browne *et al.* forthcoming).
- 3.10 All the burials known in these cemeteries date from the later part of the Roman period, the majority assigned to the 4th century, but the northern cemetery also includes burials from the late 1st century onwards.
- 3.11 Within the area of the development site the Roman road runs to the south-west of the B3041, the modern road having been diverted to run across the overbridge on the London to Southampton railway in 1840.

### **The post-Roman history of the site**

- 3.12 During most of the historic period the site of Lankhills lay in open downland, and was still shown as such on the Ordnance Survey First Edition 1" map published in 1811. The name Lankhills may derive from the former presence of lime kilns in the vicinity, probably of post-medieval date (Clarke 1979), although no evidence for these structures survives. The London to Southampton railway, built in 1840, cut through this landscape, but passed to the west of the area of the cemetery and is not known to have disturbed any burials. During the Victorian period large detached villas were built on the valley slopes, including two on the later site of the school: Lankhills House in the northern part and Osbourne Lodge, later re-named The Beeches, to the south. The railway line

defined the western boundaries of these properties, and subsequently that of Lankhills School, which was founded on the site in 1907.

#### **4 Aims**

- 4.1 To preserve by record any archaeological remains (if present) that the development may remove or damage within the impacted area.
- 4.2 To signal, before the destruction of the material in question, the discovery of a significant archaeological find, for which the resources allocated are not sufficient to support a treatment to a satisfactory and proper standard. In this event, the supervising archaeologist will halt on-site works. OA will consult with Tracy Matthews (Historic Environment Officer Archaeology, Winchester City Council) to agree an appropriate mitigation strategy.
- 4.3 To make available the results of the investigation.

#### **5 Strategy**

- 5.1 The watching brief will observe *all* works that may disturb or destroy below ground archaeological remains.
- 5.2 Provision will be made for taking environmental/organic samples in accordance with OA Environmental procedures (OA 2000).
- 5.3 Excavation of archaeological features will be undertaken to fulfil the basic objective of retrieval of archaeological data affected by the works.
- 5.4 All features and deposits will be issued with unique context numbers, and context recording will be in accordance with established OA practices (OA Field Manual, 1992). All contexts, and any small finds and samples from them will be allocated unique numbers. Bulk finds will be collected by context. Digital, colour transparency and black-and-white negative photographs will be taken of all trenches and archaeological features.
- 5.5 Site plans will be drawn at an appropriate scale (normally 1:50 or 1:100) with larger scale plans of features as necessary. Trench plans will normally be drawn at a scale of 1:100. Section drawings of features and sample sections of trenches will be drawn at a scale of 1:20. Full trench sections will be drawn only if complex stratigraphy is present.

#### **6 Report and archive**

- 6.1 A report of the findings will be produced within three weeks of the completion of fieldwork. Copies will be sent to the client and to Winchester HER.
- 6.2 The content and style of the report will be as defined in Appendix 8.
- 6.3 The site archive will be created in accordance with the guidelines published in

Guidelines for the preparation of Excavation Archives for long-term storage (UK Inst. for Conservation 1990) and standards in the Museum care of archaeological collections - see Appendix 8. The project archive will ultimately be deposited with Winchester Museum.

## 7 Health and Safety

- 7.1 All OA project fieldwork is undertaken in accordance with all relevant current Health and Safety Legislation. This includes in particular the following regulations (the list is not intended to be exhaustive):

*Health and Safety at Work Act 1974*  
*Construction (Design and management) Regulations 1994*  
*The management of Health and Safety at Work Regulations 1992*  
*Personal Protective Equipment at Work Regulations 1992*  
*Work Equipment Regulations 1992*  
*Manual Handling Operations Regulations 1992*  
*Workplace (Health, Safety and Welfare) Regulations 1992*

- 7.2 The OA has its own Health and Safety Policy, which refers to the manual Health and Safety in Field Archaeology (SCAUM 1997), and these two documents constitute the Health and Safety arrangements of the OA. The Director of OA is ultimately responsible under the terms of the Health and Safety Act (1974) for ensuring the safety of employees. He must know the broad requirements of relevant legislation; attend meetings of the OA Health and Safety Committee; ensure that responsibility for health and safety is properly assigned and accepted at all levels. The Director of the OA is David Jennings.
- 7.3 The Safety Co-ordinator of the OA: represents the director on matters of health and safety; keeps abreast of relevant legislation and approved practice, and disseminates this information to OA staff; advises staff as required on matters of health and safety; maintains the OA health and safety records; calls and chairs meetings of the OA Health and Safety Committee. The Safety Co-ordinator of the OA is Dan Poore.
- 7.4 The Project Director is the person delegated to take overall charge of a particular project. He/she is responsible for health and safety matters on the projects that they manage, reporting to the Safety Co-ordinator in the first instance, and ultimately to OA's Director. He/she must be satisfied that an adequate safety plan has been drawn up for the project, or for each phase of the project. The Project Director may also be the Project Manager in some cases (see below).
- 7.5 Individual Project Supervisors/Managers are the persons delegated to take charge of a particular phase or part of the overall project. They are responsible for ensuring that for each site that they are in charge of an adequate Risk Assessment and any amendments or additions to the Site Safety Plan have been drawn up prior to work starting on site, and they are immediately responsible for the Health and Safety of employees and sub-contractors under their supervision. They report directly to the Project Director and OA Safety Co-

ordinator. The manager for this project will be Dan Poore.

- 7.6 The OA Health and Safety Committee consists of the Director, Safety Co-ordinator, OA Manager and the Site Staff Representative. The Safety Co-ordinator normally calls meetings of the Committee when there is business for discussion, but may be called by other members of the committee.
- 7.7 OA's independent Health and Safety Consultants are Safety Services Ltd, Stanton Harcourt, Oxon, who are consulted with regard to matters such as deep trenching, shoring and working in confined spaces.
- 7.8 Prior to the project a Risk Assessment document is completed by the project manager and passed to the OA Safety Co-ordinator for comment. The Project Manager/supervisor ensures that the following information is available to the excavation team copy of the HSE poster 'Health and Safety Law - What You should Know', copy of the Risk Assessment, Emergency Information Sheet giving details of nearest hospital etc, copy of the Notification of Project to HSE, location of an accident book.

## 8 General

- 8.1 Appendices 7 and 11 are relevant.

1998 Appendices apply

## OA Standard Fieldwork Methodology Appendices

---

The following methods and terms will apply, where appropriate, to all OA fieldwork unless varied by undertakings specified in a detailed Written Scheme of Investigation.

---

### 7 WATCHING BRIEFS

- 7.1 Ground disturbances (demolition, general site strip and levelling, reduction for roads, excavation for service trenches and foundation trenches) will be monitored by an archaeological supervisor assisted, where necessary, by archaeological technicians and under the overall guidance of a project manager.
- 7.2 All archaeological features and deposits exposed will be recorded.
- 7.3 Where only the tops of features or deposits are exposed, these will be located on a site plan, planned, and recorded by written description and by photographs.
- 7.4 Visible artefacts will be collected in order to assist in the dating of features and deposits.
- 7.5 Where trenches are excavated through cut features (pits, ditches, etc.) and vertical stratigraphy is not present, the features will be recorded in section with appropriate collection of finds.
- 7.6 Where ground disturbance exposes stratified remains or significant features, the archaeologist will excavate by hand and record these.
- 7.7 The archaeological curator will be advised at the earliest opportunity of any archaeological features or deposits that appear worthy of preservation *in situ*.
- 7.8 On completion of the fieldwork the site archive will be compiled and security copied.
- 7.9 Proposals for analysis and publication will be determined in the light of the results of the fieldwork.

### RECORDING

- 7.10 All on-site recording will be undertaken in accordance with the *OA Field Manual* (ed. D Wilkinson 1992).
- 7.11 A continuous unique numbering system will be operated. Written descriptions will be recorded on proforma sheets comprising factual data and interpretative elements.
- 7.12 Plans will normally be drawn at 1:50 but in urban or deeply stratified sites a scale of 1:20 will be used. Detailed plans will be at an appropriate scale. Burials will be drawn at 1:10.
- 7.13 A register of plans will be kept.
- 7.14 Sections of features or trenches showing stratigraphy will be drawn at 1:20 or 1:10.
- 7.15 A register of sections will be kept.
- 7.16 All sections will be tied in to Ordnance Datum if possible or into the contractors TBM.

- 7.17 A black and white and colour (35 mm transparency) photographic record, illustrating in both detail and general context the principal features and finds discovered will be maintained. The photographic record will also include working shots to illustrate more generally the nature of the archaeological work.
- 7.18 Photographs will be recorded on OA Photographic Record Sheets.
- 7.19 All identified finds and artefacts from stratified archaeological deposits will be retained, although certain classes of building material or post medieval pottery may sometimes be discarded after recording if an appropriate sample is retained.

## 8 EVALUATION AND WATCHING BRIEF REPORTS

- 8.1 Style and format of the report will be determined by OA, but will include as a minimum the following:
- A location plan of trenches and/or other fieldwork in relation to the proposed development.
  - Plans and sections of features as appropriate located at an appropriate scale.
  - A section drawing showing depth of significant deposits (if encountered) including present ground level with Ordnance Datum, vertical and horizontal scale.
  - A summary statement of the results.
  - A table summarising per trench the features, classes and numbers of artefacts contained within, spot dating of significant finds and an interpretation.
  - A reconsideration of the methodology used, and a confidence rating for the results.
  - An interpretation of the archaeological findings within both the site and their wider landscape/townscape setting.
- 8.2 Copies of the report will be supplied to the client and the Archaeological Officer monitoring the works. Copies of the report will also be supplied to the County Sites and Monuments Record on the understanding that it will become a public document after an appropriate period of time (normally six months).
- 8.3 If the evaluation works generate archaeological results of importance which merit wider publication, the client will be consulted about further arrangements.

### ARCHIVES

- 8.4 The site archive, including finds and environmental material, will be ordered, catalogued, labelled and conserved and stored according to the UKIC Guidelines for the preparation of excavation archives for long-term storage.
- 8.5 The site archive will be prepared to at least the minimum acceptable standard defined in Management of Archaeological Projects 2, English Heritage 1991.
- 8.6 The site archive will be microfilmed by the RCHME National Archaeological Record as a safeguard against the accidental loss and the long-term degeneration of paper records and photographs.
- 8.7 The site archive will be deposited with the relevant receiving Museum at the earliest opportunity unless further archaeological work on the site is expected within one year of completion of the archive. The OA will advise the landowner that any artefacts resulting from the project work should be given to the relevant Museum.

## 11 GENERAL

- 11.1 The requirements of the Brief will be met in full where reasonably practicable.
- 11.2 Any significant variations to the proposed methodology will be agreed with the local authority's archaeological representative in advance.

- 11.3 The scope of work detailed in the main part of the Written Scheme of Investigation is aimed at meeting the aims of the project in a cost-effective manner. Oxford Archaeology attempts to foresee possible site-specific problems and resource these. However there may be unusual circumstances which have not been included in the costing and programme.
- Unavoidable delays due to extreme bad weather, vandalism, etc.
  - Complex structures or objects, including those in waterlogged conditions, requiring specialist removal.
  - Extensions to specified trenches or feature sample sizes requested by the archaeological curator.
  - Trenches requiring shoring or stepping, ground contamination, unknown services, poor ground conditions requiring additional plant, specialist reinstatement of surfaces (i.e. tarmac, turf).

#### HEALTH AND SAFETY and INSURANCE

- 11.4 All work will be carried out to the requirements of *Health and Safety at Work, etc. Act 1974*, *The Management of Health and Safety Regulations 1992*, the SCAUM (Standing Conference of Archaeological Unit Managers) H & S manual *Health and Safety in Field Archaeology 1991*, the OA Health and Safety Policy, and any main contractors requirements.
- 11.5 A copy of the OA's Health and Safety Policy is available on request. OA will require copies of the H & S policies of all other contractors and operators present on site in compliance with *The Manual of H & S Regulations 1992*.
- 11.6 The OA holds Employers Liability Insurance, Public Liability Insurance and Professional Indemnity Insurance. Details will be supplied on request.
- 11.7 The OA will not be liable to indemnify the client against any compensation or damages for or with respect to:
- Damage to crops being on the Area or Areas of Work (save in so far as possession has not been given to the Archaeological Contractor);
  - The use or occupation of land (which has been provided by the Client) by the Project or for the purposes of completing the Project (including consequent loss of crops). Interference whether temporary or permanent with any right of way, light, air or water or other easement or quasi easement which are the unavoidable result of the Project in accordance with the Agreement;
  - Any other damage which is the unavoidable result of the Project in accordance with the Agreement;
  - Injuries or damage to persons or property resulting from any act or neglect or breach of statutory duty done or committed by the client or his agents, servants or their contractors (not being employed by Oxford Archaeology) or for or in respect of any claims demands proceedings damages costs charges and expenses in respect thereof or in relation thereto.

#### COPYRIGHT and CONFIDENTIALITY

- 11.8 Oxford Archaeology will retain full copyright of any commissioned reports, tender documents or other project documents, under the Copyright, Designs and Patents Act 1988 with all rights reserved; excepting that it will provide an exclusive licence to the client in all matters directly relating to the project as described in the Written Scheme of Investigation.
- 11.9 Oxford Archaeology will assign copyright to the client upon written request but retains the right to be identified as the author of all project documentation and reports as defined in the Copyright, Designs and Patents Act 1988 (Chapter IV, s.79).
- 11.10 OA will advise the client of any such materials supplied in the course of projects that are not OA's copyright.

- 11.11 OA undertakes to respect all requirements for confidentiality about the client's proposals provided that these are clearly stated. It is expected that such conditions shall not unreasonably impede the satisfactory performance of the services required. OA further undertake to keep confidential any conclusions about the likely implications of such proposals for the historic environment. It is expected that clients respect OA's general ethical obligations not to suppress significant archaeological data for an unreasonable period.

#### OA STANDARDS AND PROCEDURES

- 11.12 OA shall conform to the standards of professional conduct outlined in the Institute of Field Archaeologists' Code of Conduct, the IFA Code of Approved Practice for the Regulation of Contractual Arrangements in Field Archaeology, the IFA Standards and Guidance for Field Evaluations, Desk Based Assessments, etc. and the British Archaeologists and Developers Liaison Group Code of Practice.
- 11.13 OA is a member of the Institute of Environmental Assessment and the Council for British Archaeology.
- 11.14 Project Directors normally will be recognised in an appropriate Area of Competence by the IFA. For more extensive and complicated evaluation projects especially where they are part of large-scale programmes of work in historic urban centres, the procedures outlined in English Heritage's *Management of Archaeological Projects* 2nd Edition 1991 (MAP 2) will be followed for immediate post-field archive preparation and initial assessment. Agreement to then be reached, in collaboration with the local authority's archaeological representative, about what aspects will need to be taken forward to provide a report in the required format containing the information needed for planning purposes.

## COMMENTS

3 pad pits for crane base excavated to top of chalk through dark grey humic topsoil with localised dumps of re-deposited chalk c. 400-650mm thick. This overlay mid grey brown silty clay with chalk flecks throughout and c. 200-300mm thick deposits and chalk heavily disturbed by roots.

1 pad pit left to do, not done today as in location of stone delivery due tomorrow.

3 pits were backfilled and topsoil strip started at north end of site. c. 6" topsoil over formac surface with in-situ kerb stones. service trench and Clancy Downer trench for service inspection also visible. remaining topsoil strip will not impact below topsoil.

Carillon will advise when 4<sup>th</sup> pit to be excavated and 3 already monitored will be re-excavated <sup>see over</sup>

Records?

3 pits monitored were dug in the approximate locations of the crane base pad pits, specifically to assess likelihood of archaeology being present.

∴ when re-excavated, may be in slightly different locations and of slightly different dimensions.

NO IMPACT BELOW TOP OF CHALK, SUBJECT TO WEIGHT BEARING TESTS.

SKETCH ONLY - NOT TO PROVIDE ACCURATE DWG OF FINAL POSITIONS OF PAD PITS

## COMMENTS

On site to monitor excavation of 4 foundation pits for mobile crane pads. 4x4m square pits excavated (see plan). Pit 1 came down onto earlier access road. Pits 2, 3 & 4 excavated down to natural blocky blocky chalk.

No features observed or residual finds encountered

Ground appears undisturbed with original topsoil sealed below a landscaping layer

Records? ext plan sections photos.

## COMMENTS

*On site to monitor excavation of 4 pits on NW corner of road/railway line for crane support pads.*

*Similar arrangement to those previous*

*4x4x4m square pits sited 4m apart.  
(See plan)*

*PA1 0.4m Ballast/crushed stone*

*layer terram*

*0.15m made ground; sealings dirt etc*

*0.25m Topsoil very dark grey silty loam*

*> 0.15m Chalk*

*PA2 0.5m Ballast*

*layer terram*

*0.2m made ground*

Records?

*Photos plan sections*

WATCHING BRIEF ADDITIONAL SHEET

DATE 16/4/10

SITE CODE WINCM  
AT 425

SITE NAME Andover Rd Winchester.

SHEET NO. 1 of 1

0.2m topsoil

> 0.2m compact chalk.

Pit 4 As Pit 2

Pit 3 located on edge of ditch between railway and cutting edge. excavated in steps down to natural chalk

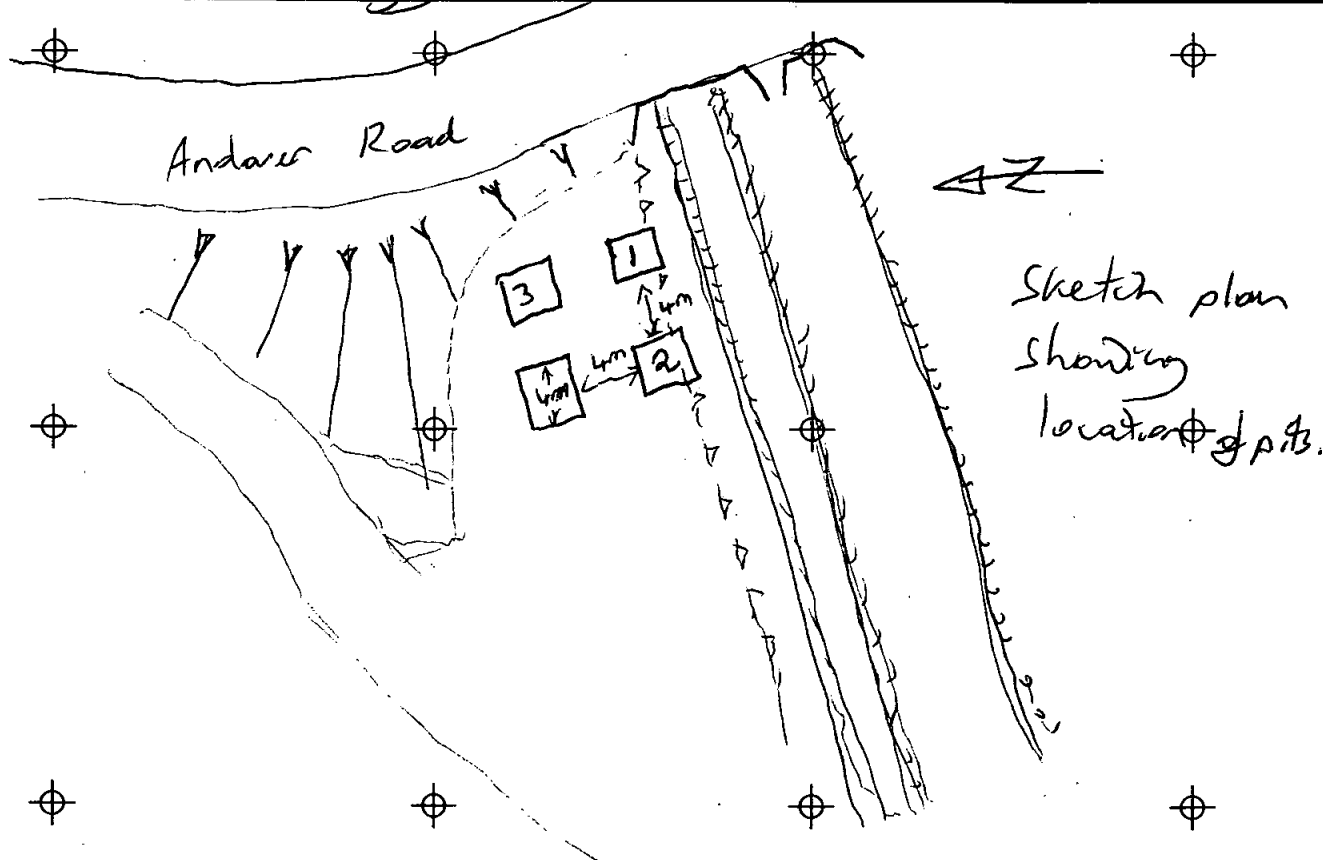

0.3-1.2m scalplings

Terram

0.2m topsoil

> 0.2m Compact chalk.

All ground appears to have been truncated down to chalk and landscaping layer of topsoil replaced. No archaeology observed.

Sketch plan showing location of pits.
