SITES ON HOLYHEAD (A5) ROAD

Project No	0001	Site Name	Stanley Toll House
OS 1:10,000 map	SH 28 SE	SMR Name	Gwynedd
Site Type	TOLL HOUSE	Milestone	
Telford Maplet	2	Telford Lot No	A9
Listed Building No		Side of Road	South
Condition	Essentially Intact	Survival	Almost Complete
Dimensions		Photo No	B/W1.04-15, CP 1 2-4
Visit Date	26/10/98	Period	Telford
From NGR1	SH 2707 8035	To NGR	
From (Name)	West end of Stanley Embankment		
To (Name)			

Toll house, now the Toll House Tea Rooms, immediately west of Stanley Embankment. It has been whitewashed and rendered. There are no toll boards, but the main structure remains unaltered. It has a slate roof and possible original windows. The Telford gate survives, but is not in situ. The building has been moved from its original location in the late 1960's in order to allow for the laying of a water pipe along the embankment. This involved a move by up to 100yds, to its present location. It is now adjacent to the modern trunk road.

The rebuild involved an accurate stone by stone rebuild, such that the present structure is an accurate reconstruction of the Telfordian structure. The original location was on the southern side of Telford's road, immediately adjacent to the railway line.

Project No	0002	Site Name	Valley
OS 1:10,000 map	SH 27 NE	SMR Name	Gwynedd
Site Type	WALL	Milestone	
Telford Maplet	4, 5	Telford Lot No	A1 (PART)
Listed Building No		Side of Road	South
Condition	Largely Intact	Survival	Mostly Surviving
Dimensions	1m high typically	Photo No	
Visit Date	27/10/98	Period	Telford
From NGR1	SE 2978 7906	To NGR	SH 3047 7859
From (Name)	South East end of Valley		
To (Name)	Immediately west of Caergeiliog toll house		

A gently undulating terrain, where the wall usually stands at top of the embankment c 1m high and is bordered by an earthen ditch to take off water. This stretch includes culvert 027. The Telford walling is typical rough-coursed with concrete mortar varying from hardly noticeable to a near-rendered effect, the latter is especially noticeable near Caergeiliog. There are some local repairs, but it essentially retains the Telford character. It ends at a private drive immediately beside Caergeiliog Toll House.

Project No	0003	Site Name	Stanley Embankment
OS 1:10,000 map	SH 28 SE	SMR Name	Gwynedd
Site Type	EMBANKMENT	Milestone

From NGR1	SH 2758 8030	To NGR	SH 2846 7984
From (Name)	Ty Rhosydd		
To (Name)	Hen Valley		

The Stanley embankment has been much altered, especially by an extension in width to accommodate the railway. This was possibly done at the same time as the addition of a pedestrian path on the north side. Although the Telford structure may partially survive, it has now been entirely encased by later repairs eg. the provision of gabions on the north side and concrete consolidation of surfacing at sea level. A sluice survives in the centre of the embankment, which is a product of the railway phase, as is the highwall (c.3m) on the south side.

A large embankment built on a natural terrace across the strait. It is faced with stone and with modern rubble walling on either side to protect against storm damage. The embankment is 1189m long, 4.87m high and the

base is 34.7m wide. The embankment carries the A5 road and the main Holyhead railway. There is a tall rubble masonry wall dividing the two and a smaller rubble masonry wall along the east side of the A5.

Project No	0004	Site Name	Caergeiliog
OS 1:10,000 map	SH 37 NW	SMR Name	Gwynedd

From NGR1	SH 3048 7858	To NGR	
From (Name)	Caergeiliog		
To (Name)			

The toll house at the west end of Caergeiliog. It retains the plan of Telford's building but has been insensitively rebuilt in the west wing with larger stone. There is concrete cladding and pointing, modern UPVC windows in the original openings. It has Asphalt roofing and plastic gutters. There is a modern archway, wrought iron gate, and an extension to the rear of the west wing.

Project No	0005	Site Name	Valley
OS 1:10,000 map	SH 27 NE	SMR Name	Gwynedd
Site Type	WALL	Milestone	
Telford Maplet	4	Telford Lot No	A6

Visit Date	26/10/98	Period	Telford
From NGR1	SH 2902 7951	To NGR	SH 2930 7935
From (Name)	Valley (depot) next to chemist		
To (Name)	East End of Church		

A Telford retaining wall. At the west end it includes a depot (record 011). A break roughly in the centre of this section seems to show meeting of two constructional forms sections. At the west end is rough slate coping with some white concrete mortaring. Where it is truncated by modern trackway, it has a tapered section and through stones. At the east end, there are modern coping stones and it is heavily mortared with concrete from the east end of the church.

Project No	0006	Site Name	Caergeiliog
OS 1:10,000 map	SH 37 NW	SMR Name	Gwynedd

From NGR1	SH 3088 7850	To NGR	SH 3097 7843
From (Name)	IN CAERGEILIOG		
To (Name)	ZEALAND PARC		

A near flat section of wall in Caergeiliog, including a substantial raised area held by a retaining wall in front of private housing (opposite chapel). This wall rises to c2.5m here and is possibly the 'hollow' filled in by Telford? Telford wall, is seen as typical c1m high rough through-stone walling with vertical capstones. Rebuilt sections have thicker capstones. There is generally inconspicuous mortaring at one point of the wall which incorporates natural outcropping stone, suggesting that this was a point at which outcrop was cut through by the wall.

From (Name)	East End of BRYNGWRAN		
To (Name)	Near CROSS-ROADS A4080/B5112		

Undulating territory including culvert and a 10ft arch (059). It is a standard Telford wall, with some embanking and repairs. There are long stretches of repair or outright replacement east of Treban, usually distinguishable from original wall by greater height, paler and less worn stone or by very regular, squared-off stone with thick coping stones. The Telford wall eventually disappears entirely and only modern rebuild exists up to Gwalchmai.

From (Name)	West of MALTRAETH MARSH		
To (Name)			

Terrain includes rather steep inclines, levelled by embanking as usual. Many depots. Telford wall is preserved essentially only in the line of the wall - there are stretches where it survives, albeit heavily mortared, for instance opposite the RAF base at Mona; but for the most part it has been so thoroughly rebuilt as to constitute a modern wall. In places where short stretches of Telford wall do survive, it is heavily repointed. As usual, the wall is absent where access roads, gateways, lay-bys or visibility splays exist.

Project No	0015	Site Name	Valley

From NGR1 SH 2933 7930 **To NGR** SH 3045 7862
From (Name) East of Valley
To (Name) Immediately West of Caergeiliog

Road runs through shallow valleys and hills, with embankments as described by Telford which are usually built up with material from neighbouring areas cut down. Some rocky outcrops have been but through. Includes numerous depots and retaining walls and at least 2 drains of 3 and 5ft. Typical breast-wall and stone dyke, retaining characteristic rough-coursed and capped Telford style. The wall is frequently breached by mod. gateways, or removed to allow construction of visibility splays for side roads. Wall is everywhere heavily mortared and in some parts largely rebuilt. End is clearly defined at junction with modern wall near brow of hill. Telford walling entirely absent through Caergeiliog.

Single storey building, slate roof, plastic gutter. Original (some) sash windows with stone sills and lintels built with freestone. Arched window in west elevation (blocked) with relieving arch above. No toll board. Modern porch in NW angle to rear. Single central chimney pot mixture slate/ceramic ridge tiles. Rear part now pebble dashed. NB. This is the toll house associated with weighbridge 231 and depot 229: all should be listed and their group value taken into consideration.

To (Name)	bridge at West end of Llyn Ogwen		

Slow drop from Bethesda to Llyn Ogwen, including Ogwen Bank and approach to Llyn Ogwen which is massively embanked and sits atop the former turnpike road. Many small drains are included in this section. Stretch from Bethesda to Tyn-maes includes many conspicuously rebuilt sections, distinguishable from Telford by its closer-packed, darker and less worn, saw-cut masonry (slate). Parapet wall had often been rebuilt or replaced, but lower (retaining) sections on this stretch are likely to remain as Telford built them. Towards Llyn Ogwen, embankment wall becomes very substantial - up to 10m? high and with many cross drains visible in section. At this pint, the wall and road are built immediately on top of the former turnpike, whose line is visible as an earlier embankment c.3-4m west of the Telford road. This lower level for the turnpike indicates that the natural peaks and valleys were adhered to more closely by the turnpike than by Telford, whose massive embankments allowed a more even gradient to be created. Nearby areas of flat rockface suggest that these were the areas cut down and used to create spoil. The last number of depots in this mountainous area suggests that spoil was accumulated from cut-down sections all around, to use in the huge embanking projects in the valley areas.

From (Name) Pont Wern-Gof

To (Name) North of Ardincapel, Capel Curig

Long section through mountainous terrain, usually slightly embanked with some rock-cut sections. Largely unrepaired original Telford wall, distinguishable by its very dark, worn appearance. very wobbly line in parts, suggesting unrepaired slump. As usual, of rough-coursed local stone, generally visible up to 1m above present road but in many places lower because of accumulated road surface. Walling on the line of Telford's and including much of its' fabric, some in dilapidated and patchily repaired condition. This is particularly apparent in the upper (parapet) walling at the north and south extremes where the wall is in a state of collapse and disrepair, with patches of modern repair distinguishable by flat coping stones. The line of the wall is ragged, and in places it appears to only 2 or 3 courses above the present road surface. Retaining wall repointed in places. From a trackway at SH 6995 5990, north for approximately 400m the wall survives to almost 1m in height above the road: modern repairs are clearly distinguished by their regular, machine cut and edge set capstones.

Lakeside stretch on upper side of road: mostly level with some undulations. Wall made largely of pale, rounded stone suggesting the use of lake cobbles for the wall. This is unlike other stretches of the wall, which use more angular stone but may result from this use of local stone. Inclusion of small depots and milestones suggest it is Telford wall, pierced in places for lay-bys etc. but PR says that depots etc. are truncated by this wall and it is therefore modern.

Roughly dressed blocks for elevations (front) stone lintels and sills to windows. Internal walls 0.42m thick. 3 rooms, fireplace and chimney stack. Front elevation right in road, internal wall faces thin flat stone. Some brick lining in FP. Roof gone. Poor state of repair/general ongoing decay. NB. This toll house is clearly of a similar style (frontal elevation at least) to Telford's toll houses, which modified this angular frontage and made its triangular plan more pronounced.

Gently undulating, but generally sloping to south through forest and rough ground. Minor road/track on line of a predecessor to Telford's road. Coming off the Betwys y Coed road, it is a minor road bounded by private houses, but soon becomes an unmarked track through forest, which retains very dilapidated boundary and retaining walls. These are of a local stone and similar in construction to Telford's walls, but in very poor repair.

The bridge carries the 'S' loop of the road to Llangwm from the A5 across the Afon Ceirw, near Astrad-bach. The bridge is within 100m of the A5. It is built of local rubble stone. It is a segmental arch spanning approximately 11m, the soffit rising to 2.65m above water level. The arch formed by 0.5m deep rubble voussoirs is slightly set in under a projecting regulating course, above which flush spandrels extend up into a flush stone coped parapet. The width of the bridge is 4.6m, providing a 3.7m humped carriageway between the parapets, which splay outwards at the ends to terminate in square piers.

The bridge carries the minor road off the Holyhead Road over the Afon Ceirw, leading to Llangwm. It was built in 1778 by John Lloyd, to the design of Joseph Turner, as part of a programme to improve minor country roads. Small, low arched single span bridge walls splayed out at each end, radial arch, constructed with freestone, crosses Afon Ceirw. Some repairs to parapet and general repointing, original bonding in lime mortar. The arch spans 10.36m, the soffit rises to c 3.14m above water level. The arch formed by 0.64m deep rubble voussoirs is slightly set in under a projecting regulating course, above which flush spandrels extend up into low flush stone-coped parapets. The width of the bridge is 5.4m, providing a 4.6m humped carriageway between the parapets, which splay outwards at the ends to terminate in square piers.

Bridge over Ceirw leading west off the A5 at Dinmael. It belongs to the road described by Telford as the 'old road' (see linear feature 090 in his lot specs.). It was built in the late eighteenth or early nineteenth centuries. It is built of local rubble stone. It is a segmental arch spanning approximately 12m, the soffit rising to 3.7m above water level. The arch formed by 0.63m deep rubble voussoirs is slightly set in under a projecting regulating course, above which flush spandrels extend up into a flush stone coped parapet. The width of the bridge is 6.3m, providing a 5.4m humped carriageway between the parapets, which splay outwards at the ends to terminate in square piers.

Small, low arched bridge, both ends of the side walls splayed with flat capstones. Arch constructed with narrow radial stones with a prominent slightly projecting keystone. 2 string courses, one above radial arch, second below parapet level. Clinging buttresses to each side of the arch finished with narrow pilasters forming the terminals of the side walls. Constructed of freestone with the exception of the wall cappings, string courses and keystone, originally bonded with sand and lime mortar, has evidence of modern repairs using cement.

Small Telford single arch over stream, c2m span. On north side, the east arch spring is particularly truncated with a modern concrete splay and a small bridge to the adjacent Old Post Office. On south side, elevation is largely unaltered - small single arch with adjacent stream-bank walling in situ.

Three arched bridge over the river Alwen, with modern fishplates and grouting pointing (which has leaked in places) and in some places rebuilding, mainly on north side. Retains its character, however. It carries the A5 over the River Alwen and was probably built in the early 18th century. It is coursed and incorporates dressed stone with three segmental arches, each with voussoirs and hood moulds. There are pilasters on either side of the central arch on the east side and there are cutwaters to the west. There are projecting string courses at the base of the parapet, which has flat slate copings. It is slightly canted in plan, the ends are splayed out at each end.

Impressive seven arched bridge over the Dee, retaining its appearance as a rubble-coursed structure with some leaching repointing. Retains? original cutwater wings. Rusting iron plate over largest arch looks like a nance plate rather than a structural tie, but this seems unlikely. Roughly coursed and squared stonework with four main arches and an additional lower archway to the south and two very low side arches at either end. The arch to the north appears to be dry. Parapet rebuilt and is formed with rough flat copings. The segmental archways comprise of roughly shaped voussoirs and projecting hood moulds. A stone has been recorded dating 1704, although this probably represents reconstruction work carried out on an earlier bridge site.

Terrain includes a number of steep inclines, levelled by cutting or embanking as described in Telford specs. Includes many depots, mostly rectangular. Wall, which is on Telford's line (excepting usual piercings (e.g. Between depots 93 and 95) entirely absent, having been replaced by wooden fencing: in other places modern road surface almost obscures the walling. Where present at all, often in short stretches of less than 1m, authentic Telford wall is very heavily repointed.

Telford wall consisting of a parapet rebuilt with modern concrete, pointed coping flat or keystone-shaped with irregular blocks. Some drain pipes are inserted and concrete mortar in places - but lower (retaining) part substantially intact. Northern part is rock-cut with spoil probably used in embankment. Some heavily overgrown rough retaining walling with a steep slope at its base. Vast retaining walls up to c.0.25m high (repointed and rendered) on the southern side. View points project from wall at southernmost curves. It is a section of the old Holyhead road, approximately 400m long, running along an engineered terrace above the gorge of Afon Ceirw, above the Pen-y-Bont falls. The road formation, recently cut off by a new cutting through the anticline, is 8m wide, with a continuous parapet wall on the outer edge which rises directly from the slightly battered retaining wall, which is generally 5.5m high. The parapet connects with the southern of the Pont Glyn Diffwys. The parapet is of stone, rebuilt in certain sections, but originally with stone on edge coping, mostly now replaced with a stone aggregate concrete coping.

From NGR1	SH 4571 7332	To NGR	SH 4650 7290
From (Name)	MALTRAETH MARSH EMBANKMENT		

To (Name)

Embankment across marsh, made up with material from nearby cuttings. Embankment across the marsh is now devoid of Telford furniture (walls etc.) having been made dual carriageway in recent years. Telford's works may survive within the later embankment but absolutely no Telford features (wall, parapet, ditches etc.) were visible. The embankment itself was obscured by trees, and flooding made close inspection impossible.

From NGR1	SH 4683 7270	To NGR	SH 4825 7195
From (Name)	West of PENTRE BERW		
To (Name)	West End of GAERWEN		

Running from resumption of Telford route at E end of Maltraeth Marsh dual carriageway, through Pentre Berw where at one point it rises to form a high retaining wall. Wall, as per Telford specs: breached in places for private drives etc., and a substantial lay-by at SH4730 7225 is typical of areas where the wall has been rebuilt further back to accommodate modern requirements. Much of the wall in Pentre Berw has been rebuilt, but W end of this stretch includes much authentic Telford wall, which is darker and more worn than modern sections.

An octagonal two storey toll house forming a symmetrical composition with single storey wings to the west and south. Stone walls are rough cast and white washed, with a slate roof and projecting eaves. Central stack to octagon with gable stacks to each wing. It has a slate roofed veranda supported on seven cast iron pots linked by railings, with gate set in front of the doorway in the north-east face. The windows are slightly recessed 3 light casements; each face of the upper storey has window sized recesses, those on the north and east carry toll boards, the north-east has a matching 3 light casement above the door the remainder are blank.

Two Telford 'sunburst' gates survive at the east end of the bridge - LB 4049/4050. The bridge comprises coursed rubble Penmon masonry with ashlar facings to the tapered suspension towers or 'pyramids' from which the deck is hung on a system of 16 chains (originally iron, now steel) with pins. These are carried down at either end to a point deep in the rock. 4 arches to Anglesey side and 3 to Bangor side, over tapered piers; voussoirs,

impost bands and bracket cornice above. The later metal pedestrian walkways are further bracketed out; originally there was just the narrow central pavement. Each carriageway passes under the towers through semicircular arched openings, matched above by paired blind recesses over inscribed tablets. The handrails continue as far as the low tapered piers with pyramidal caps at each end and on the mainland side trellised railings continue to either side and sweep round to terminate in similar piers with panelled recesses.

At the mainland end the suspending members are taken into the former Toll House, a low 3-storey classical ashlar faced building with channelled rustication to ground floor. 3-bay front facing bridge with broad and taller end pilasters and arched entries; central bay advanced and taller and flanking bays have 12-pane sash windows below blind recessed panels; arched openings to ground floor 'loggia'. 2-bay side elevations with similar detail. The building ramps down at rear which is part modernised. Later toll houses were built at either end of the bridge.

From (Name)	Near CRICKET GROUND, BANGOR		
To (Name)			

Derelict area with young trees etc. between A5122 and cricket club house. ??Possible survival of a short stretch of turnpike road, being in the right location for a section by passed by Telford and shown on his plan. Some tipping and spoil collapse, and young tree growth: this may simply be a waste area dating from construction of the industrial estate, but location makes consideration worthwhile. Bordered to E by a short stone wall (on private land, so not examined).

Length of Telford wall acting as a retaining wall to the slope within a steep river valley. Telford walling, contemporary with Telford road. Largely intact with some modern repointing, heavy in places. Built of rough coursed rubble masonry. Slightly uneven line indicates dilapidation before modern consolidation. Telford capstones are rough-cut but evenly sized in accordance with specifications, and set on edge. Occasionally these are topped by additional modern capstones.

A small square building, pitched roof with slate tiles and ridge tiles. One window on S and W; each with simple slate cross-lintel and sill: rest in rough-coursed, massive blocks of ??granite set in concrete mortar. Graffiti on sills from early C20. Door on north side. No opening on east except a lintelled opening at ground level, leading into bottom of building where spring was housed. Seems in good repair: no evidence of machinery in situ, but a vertical channel which formerly housed the spring? Was visible, see digital photo which was taken with flash. This is one of only two known surviving weigh-bridge booths on Telford's road, and should be included in the listings, if any.

40ft span single arch bridge over river Llanfar, as described in Telford specs., but much altered. A cantilevered footpath has been added on east side, in concrete, and the side walls and parapet brought out accordingly. The Telford arch, whilst visible and apparently intact, has been conspicuously repointed with concrete and does not retain its character.

20ft bridge in Bethesda, apparently to Telford's specs. Although full inspection was not possible (young livestock in field). Grading reflects apparent integrity of bridge, which has nonetheless been much repointed. It is a rubble stone single arched road bridge. It has a string course broken forward over the outer buttresses. It has a rubble stone parapet with slate edge on coping. The bridge has been widened on the east side with a flat concrete span, but not altering the bridge except for the loss of the parapet.

From NGR1	SH 6256 6651	To NGR	
From (Name)	Bethesda (North of MILESTONE)		

To (Name)

10ft arch over stream at Bethesda, conforming to Telford specifications and relatively intact (though repointed) on west side, but extended on east to accommodate modern walkway with a concrete and steel cantilevered extension which completely conceals the Telford structure. The thickness of the bridge has therefore been extended on the east by c.1.5m.

From NGR1	SH 6265 6605	To NGR	SH 6436 6500
From (Name)	South End of Bethesda		
To (Name)	bridge over AFON IDWAR		

Road a wall climb up along as sinuous route of Bethesda through areas of rock cutting with small drains (18 in.) mentioned in specification, then drops down towards Tyn y Maes from which point it runs relatively straight on a gradual E-W uphill gradient becoming more sinuous before Afon Idwal bridge, acts as retaining wall on rising ground where considerable cutting into slope has been carried out. The wall is generally intact but has been broke/rebuilt for new building entrances especially in area of Snowdonia park and adjacent lots (SH 6342 6400) where building work is in progress. Contains 20+ semicircular depots generally in reasonable repair, best preserved where revetted into slope toward south part of stretch. Many have modern cement bases sloped towards roadside gutter to encourage water run off.

It was impossible to measure or record the depots between Bethesda and the bridge at Llyn Ogwen, so they were simply noted: this was due to dangerous traffic. Individual grid references are not 100% accurate for these depots. However, it can be said that those at the northern end were generally in a poor state of repair, and those at the southern end had been maintained by the application of heavy pointing and concrete/tarmac flooring. They were generally semi-circular.

From NGR1	SH 6378 6336	To NGR	
From (Name)	Bethesda-bridge at West of Llyn Ogwen		
To (Name)			

It was impossible to measure or record the depots between Bethesda and the bridge at Llyn Ogwen, so they were simply noted: this was due to dangerous traffic. Individual grid references are not 100% accurate for these depots. However, it can be said that those at the northern end were generally in a poor state of repair, and those at the southern end had been maintained by the application of heavy pointing and concrete/tarmac flooring. They were generally semi-circular.

Generally sloping down to W, in area of many streams. Present culvert/bridges, where seen, are of modern construction. Extremely degraded section of Telford wall, in the more rounded rubble masonry characteristic of this area. Includes very many (c.27) depots, many almost gone (nos. 311-375). In places the wall is visible for only c. .20m above the present road surface. In many places it is collapsing and carries modern wire fencing on top.

The milestone is set against wall north side of south bend to north of Chirk bridge. This particular milestone was set in place by Wrexham District Council in 1894, although the stone itself may be an earlier turnpike milestone. Typical design with a rounded top and a cast iron plate with raised lettering stating: Wrexham district 1894 DCC, and the miles to Wrexham 10 2, Chirk, Glyn 6 8 and Llanarmon DC 11 1.

Single storey 'L' shaped lodge of rubble construction, with shallow pitched slate roofs, half hipped to the north and west. These have deep verges and eaves, the latter carried forward on the main side to form a verandah-style porch over the entrance; plain wooden posts with struts. The entrance is to the left of a recessed 4-pane sash window and has a boarded door. To the left of this an advanced cross-wing with recessed 6-pane window to the road side and a blind window above, beneath an overhanging half hipped roof. Plain 4-pane casement windows with slate lintels. Central stack with 2-stage chimneys, rendered below and brown brick above, simply-moulded, weather coursing.

Intact iron and stone bridge, but has modern railings and road surface. It has been expanded to accommodate increased traffic volume. Its distinctive character remains intact. A cast iron road bridge built 1815-16. The bridge was originally known as Llynonn bridge and is thought to be the seventh major iron bridge in the world and with a span of 30m is an impressive example of early iron technology. It is a wide single span iron road-bridge, with masonry springing. The segmental arch bears the cast lettering 'This arch was constructed in the same year the battle of Waterloo was fought'. The spandrels contain bold foliate decoration, depicting the national emblems, the rose, the thistle, the shamrock and the leek. At the Betws end is inscribed Thomas Telford Engineer, and at the East end are the names of the founder and foreman and the date 1815 in the centre. The arch soffit is reinforced with modern concrete, the simple cast iron balustrades have been cantilevered outwards in recent years.

An early bridge ascribed to Howell Saer by Edward Lhwyd writing in 1699. The present fabric is seventeenth century, but widened and rebuilt in the late eighteenth or early nineteenth centuries. It is a 5-span rubble bridge of roughly 45m length, originally of 2.5m width, but widened to the north west by a further 2.5m. The arches are

segmental and of varying widths and heights, some springing directly from the rock. The central widest span extends across the river proper. It has roughly dressed voussoirs, which are slightly inset beneath arch-rings formed of narrower stones. It has low rubble parapets, splayed at the approaches and with sandstone slab coping.

Bridge as per Telford's specs, somewhat repointed with mortar which has leached. It comprises two wide segmental arches and has a central pier with pointed cut-water, roughly dressed voussoirs, slightly recessed and tapering pilasters at the sides. It has a rebuilt parapet on both sides, with flat coping stones, and 'fish plates' e.g. modern steel ties holding it together, and buttresses. It has curved retaining walls on the approaches. It has rebuilt water-wings? But retains character of Telford original. There are several cross drains surviving to the south. It has group value with Ty Hyll (Ugly House).

From (Name) Pont Padog
To (Name) West of VOCLAS LODGE
 Very steep bank near River Conwy. Telford's wall is here very distinctive, being (as it often was on Anglesey) drystone in construction, using the flat-planed dark slates in rough courses, with very narrow and uneven slate coping. Where repairs have been effected, they are relatively obvious; often consisting of pre-cast stretches, with more round and larger stones in concrete mortar.

To (Name)			

Part of a series of semicircular depots adjacent to the eastbound carriageway of the road between Pentrefoelas and Cerrig. Most of the depots are 70-60% complete, though some are more degraded and heavily overgrown, only surviving in 1/2 courses in height. Others have actually been heightened with courses above the original Telford copings to strengthen stone dykes, field boundaries - example no. 555.

A small weigh bridge house opposite the Ty Isaf toll house, now the Bwythyn toll house. It has a west facing elevation and modern pointing in pinky-brown cement. It has two wooden doors possibly with new lintels above either side of a central dividing wall. It has a replaced grey/purple slate roof and forge boards. The east facing elevation has a single door. The north side has the same repointing as the west side. New door lintel. The south facing elevation has an arched central window. The north. facing elevations has no features and has been completely obscured by modern repointing.

Located on the south side of the A5 on the western edge of Glyndyfrdwy. The structure was probably constructed around 1820 in association with the Holyhead road turnpike. Appears to have been remodelled around 1870. The original building consists of roughly coursed rubble (painted) with a slate roof with axial and end wall stacks. The structure stands three storeys high with three window range and a central entranceway. The door is four panelled with an over-light within the canopied porch, flanked by a three-light mullioned and transomed windows to the ground floor, above which two-light casement windows are located. All are renewed with original openings with flat timber lintels. To the right of the building a low extension dating from around 1870 and consisting of a hipped roofed porch to the left and three-light mullioned and transomed window to the right, with two wide gabled dormers above. A further extension is located to the rear of the building and dates from around 1870. This extension consists of three gables with oriel windows on the first floor and extensive repair to the lower openings.

To (Name)			

Mona coach house survives intact and is in use as a farm house. It is a two floor, five bay structure. Rendering has obscured the stone work. It has sash windows but these are not considered to be original. There is an extension the west of the main building. There is a range of buildings set around a courtyard, which are shown on the OS 1st edition map, and were evidently stables. They are now in use as farm buildings. It is a purpose built complex designed and built by Telford and completed by 1830, it was built as an inn and staging post. The inn forms part of a double courtyard of stables, coach houses and other accommodation, it has been subject to only limited alteration but has not been adequately explored. The building is in need of maintenance. There is a mile stone immediately opposite the building (Site 111) which has a blank against the distance from Mona.

Section of very steep sided embankment with a section of turnpike set at its base. The line of turnpike has an undulating surface and is partly overlain by the Telford embankment. The turnpike section is revetted by rough dry-stone masonry, which contrasts with the much better quality revetment of the adjacent Telford revetment walling. The Telford road is up 6m above the surface of the earlier turnpike road.

A small square shaped, building of rough dry-stone construction. The walls are exceptionally thick, being up to 1m in width. It has extremely small square windows without any framing. It has a low entrance on the eastern side. There is an irregular enclosure extending out from the entrance of the building. The building is located adjacent to the Nant Francon beck. The building is described as a sheepfold on the modern mapping and also on the OS first edition mapping. The appearance suggests that the building may have served as a powder house, hence the very thick walls. If this is the case it was subsequently converted to a bothy, hence the irregular

enclosure. The enclosure is shown on the OS mapping and there is the possibility that it was constructed as a bothy. Simple rectangular drystone rough-coursed slate walls with small windows. No internal inspection as deemed unsafe. It now has an asphalt roof and later additions.

Small single arched bridge for the pre-Telford turnpike road. It is of solid, well constructed masonry and is in good condition. The road surface has an arched profile, which contrasts with that of the Telford bridges which are designed to be level. The bridge is fairly narrow and is up to 0.75m of the width of the standard Telford bridge.

A major road bridge on the line of the pre-Telford north/south turnpike which crosses the line of the A5 near Rhydlanfair. The bridge crosses the Conwy and is of well constructed mortared, dressed masonry. Like most of the turnpike bridges, it has a very slender construction, and the road surface has a humped profile, by contrast with the Telford Bridges which have a level road surface and are of a much stronger and substantial construction. The bridge has a 1780 datestone.

To (Name)			

The Cernioge coach house. It is earlier than the Telford road, and was formerly the Prince Llewelyn Inn. There is a reference (Harper 1901) to it having been in use in 1795, and that its heyday was in 1836. The inn lost its coaching licence in 1839 when it was taken up by the Pentrefoelas Arms, and is now a private house. It is based on a pre-existing late eighteenth century farmhouse, which was extended by Telford, and has now been reduced back to its original size. At Cernioge Mawr is now a complex of farm buildings and a private house, which are remnants of the coaching inn. On the north side of the road stands a building associated with this complex, which was possibly part of the inn and has changed little since the early twentieth century. It is a stable block of the Telford period, which has been divided into two plain rooms with slate foreplaces. There is blind arcading on the rear wall, from the former stalls. The stable is set within a contemporary walled enclosure. A ruined structure seen east of the farm, on the north side of the road, may be a remnant of this pre-Telford structure but could not be firmly identified.

White washed rough cast with slate roofs and rough cast four shaft cornice end stacks. It has slate coping. It is a three storey, three window range, with two parallel ranges with large hipped square roof lantern over the centre valley, and on each side there is a row of four 6-pane windows. The façade has marginal glazing bars to second and ground floor sashes, with four pane sashes to first floor and the windows are graded in size. There is a centre broad flush panelled double 2-panel with over-light in timber roman Doric porch with entablature and cornice. The ground floor door and 12-pane sash on each floor above, and are all to the right of the left gable. It was probably built 1820-30 to serve Telford's new Holyhead road.

Rubble stone three arched bridge, which has been doubled in width in the early nineteenth century. The original north side has a low rough stone voussoir arches and a rubble parapet. The north west end has been splayed in the early nineteenth century giving an overhang to the right half of the central arch. Added earlier in the nineteenth century it has three shallow elliptical arches with cut slate voussoirs and raised ring arches. Low cut waters and raised piers between the arches. There is a rubble parapet with edge on stone coping. This is a pre-Telford turnpike bridge which was ruinous in the 1790's and enlarged in 1805.

It was built in the eighteenth century, probably before 1794. It is built of local rubble stone. It has a single segmental arch spanning approx. 11m between rock abutments, the soffit rising to 18m above the water level. The arch is formed of 0.5m deep rubble voussoirs slightly set under a projecting regulating course, above which flush spandrels extend up into a flush stone coped parapet. The width of the bridge between parallel sides is 5.6m, providing a 4.7m wide level carriageway between the parapets, which splay slightly outwards to terminate in square piers.

Smithy building that stands on the NW corner with the junction of B5605 Newbridge Road. This structure was reputed to belong to Mr Davies; a smith employed by Telford during the road construction works of 1819 onwards. A keystone is visible above the forge reads: '1825 Davies', although this has probably been reset. The building is constructed of stone with slate roof and stone stacks and consists of a two storey structure with two abutting L-shaped buildings with left gables facing the main road. The more westerly building has a doorway and dormer window overhead with cut bargeboards. The easterly building is set lower down with the easterly arm containing the smithy; the open front of which faces the B5605. Some modern alterations to the building consist of stained timber windows to the wings.

Originally constructed in 1837 to house 150 paupers, although the building had some rebuilding around 1900 when most of the windows were replaced with larger ones. The building closed around 1941 after which it was utilised as a factory. The building is currently used as a guesthouse/craft centre.

The design of the workhouse followed the Benthamite principles: a central octagonal top-lit tower and four radial wings. Constructed mainly of rough coursed rubble (limewashed to front elevations) with a slate roof. The main gable consists of well coursed stone with ashlar dressings including continuous string course. The main entrance is via gable in a pedimented and slightly advanced central section comprising of a Doric portico in antis, the doorway is flanked by a nine paned sash windows. There are nine and twelve paned sash windows visible to either side of the pediment which has a tripartite window in its upper storey. There are similar designed sash windows to the rear of the main block. From the central octagon, the longest wings radiate east-west which is seen externally by splayed walls across each of the four angles between the radial wings. These walls comprise of wide segmentally arched cast-iron small paned windows (some of which have been replaced by the four pane sash windows). The central octagon is surmounted by a glazed lantern and a high wooden cupola. Each of the long wings terminate with slightly advanced hipped roofed pavilion: originally three-window ranges, and some of the original round arched windows with cast iron fixed lights survive. At the inner angle of the wings and central octagon on each side, the wing is stepped out and contains a round arched doorway with cast iron n glazing to the overlight. At the rear, each wing has paired four-paned sash windows to the ground floor and an round arched overlit doorway in re-entrant angle and some original window openings remain intact.

The retaining wall is largely Telford's, but substantially repaired and repointed in its higher sections. The parapet wall is believed to be entirely rebuilt for most of this length, with very regular capstones unlike Telford's more weathered ones. Clearly, in areas where the current pavement has been extended to the west (as in parking areas and a rectangular 'depot' the wall is entirely new.

A sunburst gate stands at the entrance to the farm driveway. Next to it is a cast iron turnstile of similar style, which is thought to be also taken from the Telford road. If so, it is the only known survival of a turnstile formerly associated with the road, and it is doubly fortunate that its association with the sunburst gate continues. The turnstile has four panels, each of which has two iron cross-struts in an 'X' shape, secured by a central rivet. It turns on a post and socket. The gate and turnstile are both painted white and like the gate, the turnstile has flat top- and base-plates. They are both in good condition, although the quarter-circle sunburst centres on the gate are not riveted but welded and are believed to be later repairs. The gateposts are not original but the hanging post and fixings may be so.

Located near the A548 a sunburst gate which is somewhat bent and overgrown, is in place at the entrance to a farm drive. It is largely intact, but the lower sunburst centre has no rivets and is assumed to be a later addition. The gate is painted white and silver. The gateposts and fixings are not original.

A rather battered and rusted sunburst gate is in use at the entrance to a field, off a minor road. The gate is painted red, and retains a flat top plate running across the gate; it retains its original hanging post or hinge with a shaped finial. It is set in non-original rough-cut slate gateposts. Several of the cross-struts are slightly bent, and the gate is generally not in good condition.

<i>To (Name)</i>			

This sunburst gate is located near Conwy, and near the Telford Bangor/Chester road, which is in use as an access gate to Marl Farm. The gate is in good condition, although two substantial cross braces have been added to strengthen the original sunburst bars. The alignments of former gate sockets indicate that the gate posts are not original. The gate was probably taken from a former tollhouse on the Telford road or even possibly from the bridge at Conwy where one gate remains in situ.

A sunburst gate is in use at the entrance to a multi-period farm complex which is itself of great architectural interest. The gate is painted white, and in good condition except for slight rusting on the upper sunburst centre. The catch and probably the hanging post are replacements, and the polygonal slate gateposts are not original.

<i>From (Name)</i>	Llyn Ogwen		
<i>To (Name)</i>	Capel Curig		

A pre-Telford road which runs south of the A5 along Nant Francon, between Llyn Ogwen and Capel Curig. This is a line south of the Holyhead road, starting opposite Glan Denau at SH 6680 6055 and running east and south-east along existing tracks and paths to a curve at SH 7175 5897, then curving around Creigiau'r Gelli and meeting a surfaced track at SH 7199 5845, from whence it runs south into Capel Curig and meets the Holyhead road at SH 7205 5815. It is an important remnant of the former road, which now survives only as an earthwork. Its location and form make a marked contrast with the Telford road immediately to its north. While this early road is only slightly embanked and lies in the flood-prone valley of the Afon Llugwy, the Telford road is raised higher above the waterlogged ground. The Telford road also includes bridges and drains (notably Pont Rhyd-och) to keep it relatively dry.

The hotel stands in the north-west quadrant at the centre of Pentrefoelas. It is an old inn, but the first recorded license was that issued to Robert Jones in 1762. The southern part of the building is eighteenth century, but was refronted by the voelas estate in 1839/40. It is built in local rubble stone with a slate roof. The front single-pile block is of three bays and three storeys, with a central entrance set in a shallow porch. It has a canted late nineteenth century window on the left side and a 12 pane sash window in the right bay. It has a gabled entrance porch and 12-pained sashes with deep stone lintels outlined by a flush label course.

From (Name)	North End of Chirk EMBANKMENT		
To (Name)	South End of Chirk EMBANKMENT		

Steep, narrow valley of the Dee across which Telford built a huge embankment (feature 996) thereby bypassing this section of steep and twisting road. Embankment to a height of c.7m at the north end and falling to c.1.5m at south, this embankment carried the pre-Telford road. The top of the embankment is very narrow (partially truncated by a brick-lined millrace of C19 date) and seems to have been little more than 2m across at its broadest. Its angle of incline is much steeper than Telford's embankment, and it is much lower. Clearly visible in young woodland as an unsurfaced path.

From (Name)	North End Chirk Valley		
To (Name)	South End Chirk Valley		

Steep sided, narrow valley of the river Dee through which the former road took a steep and winding course. Telford was not able to eliminate the bends, but built this enormous embankment to carry his road to the north end of Chirk bridge, bypassing the old road section now numbered 994. Embankment survives in apparently good condition, with some trees. Although the bridge immediately to the south (feature 1000) has been widened, the embankment seems not to have been - witness the Telford arched drain which runs through the bottom (998) to carry a mill leat to the river. Telford here allowed a gradient of 1 in 20, most unusual for him - and specified that where ground had to be cut down (presumably at north end) the topsoil should first be removed and later replaced.

From (Name)	Immediately North of Chirk Bridge at Chirk mill		
To (Name)			

Mill race described in Telford's specs. for Lot 052, 2 stone built structures identified. 1) Vaulted stone drain running through the full width of the embankment to the north of Chirk bridge, on the east side the opening is constructed with voussoirs in pale grey sandstone? with distinct tool/pick marks to face (see TT spec.) The opening appears to have led to a square stone built structure which is quite degraded. The base of the drain/leat is full of debris to the base of the arch. On the west side the opening is blocked off with corrugated iron sheet, however, some voussoirs of the drain are still partially visible, and there are waterwings constructed of freestone blocks which are in a poor state of repair. 2) The line of the race is visible to the west of the access track on the west side of the bridge - running into the river as an open gully with some loose freestone blocks visible. Immediately adjacent to the wall is the top of a vertical limy mortar bonded freestone structure, probably an arched drain or culvert with the top of a side wall to the leat partially exposed on the south side.

Single span arched bridge, in fine dressed sandstone. Different in character to almost all the Telford bridges in Wales, which had to use rubble masonry. Some leached repointing below parapet: many mason's marks visible to west side, but east side is a later extension which copies the Telford side. A plate on the east bank indicates that the bridge was built in 1793 by Telford (but not as part of the Holyhead road) and widened in 1924.

Depot associated with Telford wall and road, in the stretch running between Bethesda and Nant Francon. Extremely decayed slate-built recess of rough-coursed drystone construction, with edge-set capstones: the original plan is difficult to determine due to overgrowth.

To (Name)	W tip of Llyn Ogwen		

Almost entirely rebuilt section of walling, whose origin as a Telford wall is clear because of the depots within it. The wall generally survives up to 1m high. The stretch is largely rebuilt, sometimes raising the wall by the addition of extra courses above Telford's edge-set capstones, but includes a better-preserved section south of Ty-gwyn, incorporating numerous depots.

Depot, much overgrown and with no evidence of tarmac surfacing. The plan is largely indeterminable because of heavy overgrowth and difficulty of access on this busy road. Within Telford wall stretch 2054. Of rough-coursed slate rubble construction, possibly mortared at one time but now dilapidated and collapsing. No evidence of re-flooring or of modern maintenance.

To (Name)	Tan-yr-allt Cottages		

A section of retaining wall and parapet wall defining a slightly embanked section of Telford's Holyhead - Chester road. Although it incorporates much original material, the wall is clearly of two builds and is thought to be largely rebuilt. Alternatively it may represent the addition of the parapet wall after the retaining wall was completed. Wall is of rough coursed rubble construction, mortared and with a double row of capstones, incorporating much slate. Visible to maximum of 1.5m above the present road surface. Modern drains visible at base of wall, at intervals of c.1.5m. NB this stretch of wall continues the eastward line of 'road' 001, which is interrupted by the present A55.

Arcade consisting of cast iron pillars supporting a gently pitched tiled roof projecting from first storey level of C19 buildings on mains street at Penmaenmawr. Not contemporary with the Telford road but included because of it's proximity to it.

Stone milestone standing within a row of slate slab fencing, stands to a max height of .07m ,though is now partially buried. A datum mark and height were just still visible at time of survey . The Stone is rounded to the rear, and has radiating incisions around the front 'plaque' . The top has a small cup like hole in it, The stone indicates Bangor and Conwy both 7 miles.

From (Name)	West End of lot 90		

Short stretch of boundary walling on the line of Telford's Holyhead - Chester road, but largely rebuilt in recent years, with replacement slate capstones particularly obvious and heavy concrete repointing, wall is of rough coursed construction including rounded stones which were probably taken (as per specification) from nearby shores. The line of the wall is uneven, suggesting that it was in poor repair before modern consolidation.

From (Name)	West end of Tunnel, Penmaenbach		
To (Name)	PENMAENBACH POINT		

Possible stretch of Telford's Holyhead - Chester road surviving in the line of the present cycle track/footpath around Penmaenbach point. Unlikely to include any Telford fabric, as extensive works to build the railway and later A55 (including a substantial road tunnel immediately south) have disrupted it. Access was not possible due to roadworks at the time of field visit.

From (Name)	Cycle track over Penmaenmawr		
To (Name)	Cycle track over Penmaenmawr		

A boundary wall defining current cycle track over northern slope of Penmaenmawr. Although the wall is not thought to be of Telfordian date, its dimensions (c.1m high) and style (rough cut slate, single capstones on edge) are very similar to those on the Telford Holyhead- Chester road. In places this wall has been incorporated as the lower course of a modern wall, whose machine cut stone and concrete mortaring distinguish the two periods. The cycle track, now tarmacked, and with entirely modern walling for most of its length, may therefore include fragments of an earlier track contemporary with Telford's road. (Now lost under the a55)

From (Name)	West of hospital on approach to Conwy		
To (Name)	Bangor Gates at Conwy		

1km of stone walling running along the A547 to Bangor gates at Conwy. This is the north wall of the approach road, and is heavily rebuilt and frequently interrupted, there is no paving for most of the route, with the exception of the first 200m. It ranges in height from 1.5m - .80m. All of the wall sections have been heavily repointed and the section bounding the school playing field approaching Conwy has been rebuilt to a height of 2.0m. And now appears entirely modern.

Telford's breach in the city wall at Conwy to allow passage of his Holyhead-Chester road has left, on the south side of the road, a raw stub of wall which may have been further cut back by C20 road-works. On the north side an ashlar façade has been built. Similar in style to the masonry of the Bangor gate at the north west end of the town, it is judged to be contemporary with it. Square turrets at the east and west ends frame a two storey façade of granite masonry but without castellation or other motifs adopted on the Bangor gate and the Conwy bridge.

From (Name)	West End of LOT90		
To (Name)	West End Football Ground at Penmaenmawr		

Section of boundary wall on the line of Telford's Holyhead - Chester road. At the west end this section is largely rebuilt (like its northern counterpart 013) with modern slate capstone evident. Wall is of rough-coursed rubble construction including numerous rounded stones, probably from nearby beaches. From church road (SH 7220 7665) eastwards to SH7225 7665 the Telford walling has been incorporated as the lower course of a heightened wall, and its' capstones are clearly visible in the body of the wall. This section has been heavily repointed and in places almost rendered with concrete. In the easternmost section it is occasionally interrupted by private boundary walls, but survives with its original dimensions, c.1m high, above the present road, and largely intact albeit with some modern capstones and concrete pointing.

From NGR1 SH 7590 7830 **To NGR** SH 7670 7825
From (Name) East of Conway Quarries
To (Name) Slip road of A55

Section of former Telford road, surviving only in the line of the Bangor road at its western terminus. The road is a modern tarmac track defined by wooden fences and earthen banks no greater than 2.5m in height, with no evidence of a milestone shown here on the first edition OS map. At its eastern end, 024 is interrupted by the A547 slip road to the A55. At its western end it terminates at a wooden fence beyond which the road seems to have been partly buried. The Telford road line reappears briefly to the west in a lay-by off the A55. A section of boundary wall at the east end of this feature (on the north side) may be partly original, or may re-use Telford fabric, but has been rebuilt in recent years.

To (Name)			

A stretch of roadside walling on the approach to Conwy. It is unlikely that this walling dates to the construction of Telford's Holyhead - Chester road, but it may include some Telford fabric. The lower courses of the wall clearly predate modern upper courses and capstones, and the whole wall is heavily pointed with concrete mortar. In section the wall is straight-sided, without Telford's regular batter, and the wall is c.1.2m back from the road. However, it is of the same height and approximate thickness as Telford walling, and on the line of the Telford road into Conwy. Interpreted as a modern wall of two builds. Rough-coursed rubble construction.

An archway inserted by Telford's road makers through a turret of the city wall, Conwy, to allow access for his Holyhead-Chester road (here the A547) to the north of the walled town. An Ashlar rounded arch is flanked by square turrets with mock arrow-slits. Above the arch corbels support a walkway, above which rise the remains of the north-west projecting medieval turret. The width of the turret has clearly limited the possible width of the road, which is here barely 2.5m. It is not clear whether Telford's was the first road to pierce the city wall here, or whether a previous road had done so. A smaller arch to the east allows pedestrian access.

Toll house and gates. A toll house of ashlar single-storey construction, rectangular plan with a central room of 1 1/2 storeys projecting slightly to north and south. The toll house is of a mock-castellated style, with a rounded

and crenellated turret at each corner and pointed arch openings to windows and doors, in homage to nearby Conwy castle. It retains the rectangular recess for a toll board above the door, where a facsimile board is now set. Immediately south east of the toll house stands the original 'sunburst' gate for road traffic and a smaller corresponding gate for foot passengers. Both retain their hanging posts/hinges and latches, as well as latches fixed in the road to hold them open. The two gates have spiked top plates, also of iron, which are thought to be later additions, and are painted white. Cylindrical gateposts of ashlar, with conical capstones, are original.

From (Name)	River Conwy		
To (Name)			

Telford's famous suspension bridge over the River Conwy, built in 1826 and largely intact. Mock 'towers' of fine limestone ashlar at the east and west ends bear the weight of suspension chains (four chains on both the north and south sides, with an additional modern steel cable on top at each side.) Links and pins are believed to be original. At its' west end the chains pierce the wall of Conwy Castle, and are anchored within its' precinct: at the east, substantial iron fixings anchor the chains immediately west of toll house 028, iron cross-bar railings are original (except a single panel at the east-end.) but the struts between the railings and chains are thought to be partially replaced. The deck has been entirely replaced in recent months. Towers are crenellated with mock turrets, arrow slits and bartizans in reference to the neighbouring castle, between whose own turrets the west end of the bridge sits. The tradition of castellated architecture was later continued in the railway bridge to the south. Curving walls to the immediate east and west have less ornate capstones and may not be contemporary.

A short stretch of curving road, believed to preserve the line of the Telford road which was in use until superseded by the present A55, and which may retain some Telford fabric in the south wall. This acts partly as a retaining wall at the foot of Penmaenbach. The north wall is undoubtedly a modern replacement, contemporary with the modern building which stands between it and the A55.
