

Death and Taxes

The archaeology of a Middle Saxon estate centre at Higham Ferrers, Northamptonshire

by Alan Hardy & Bethan Mair Charles

with contributions by

*Martin Allen, Paul Blinkhorn, Emily Edwards, Emma-Jane Evans, Robert Francis,
Clare Ingrem, Paul Linford, Lisa Moffet, Fiona Roe, Ian Scott, Edmund Simons,
Gill Thompson, Annsophie Witkin*

Illustration and design
Rosalyn and Peter Lorimer

SFB 12800	30
Other Phase 1 features	30
PHASE 2 (EARLY 8TH CENTURY TO EARLY 9TH CENTURY)	30
Phase 2a	31
Enclosure ditch (2658 -Site 2, 15370 – Site 8)	31
Building 2664	32
Phase 2b	35
Enclosure ditch	37
Building 2665	40
Building 2666	40
Other structures	43
Building 7023	43
Associated features	44
Building 7237	47
Building 9184	47
Phase 2c	47
Enclosure ditch (Sites 2, 4, 8)	47
Malting oven	48
Associated features	54
PHASE 3 (MID 9TH CENTURY TO 11TH CENTURY)	54
South-west group (Site 4)	54
Central group (Site 4)	54
Northern group (Sites 4, 2 and 8)	55
Gullies and associated features	55
Building 7321	58
Building 6811	59
Paddock complex	59
SFB 15300	59
Ring gully 15365	63
PHASE 4 (11TH TO 13TH CENTURY)	63
Southern settlement (Site 7)	64
Building 9528	65
Eastern settlement (Site 8)	66
Linear features and Building 7025	69
Building 7025	70
PHASE 5 – 14TH CENTURY TO MID 15TH CENTURY	70
Pottery kilns and associated structures	71
Kiln I (Site 6)	71
Features associated with Kiln 1	75
Building group 9230	75
Kiln 2 (Site 8)	75
Associated features	79
Quarry pits (Site 4)	79
Pits and linear features (Site 7)	79
PHASE 6 – MID 15TH CENTURY TO 20TH CENTURY	81
Building 9548	81
Well 15155 and associated surfaces	84
Site 4	84

Chapter 4: The Material Evidence

POTTERY	85
Introduction	85
Analytical methodology	85
Fabrics	85
Post-Roman pottery by Paul Blinkhorn	86
Chronology	86
Pottery occurrence	89

Table 5.4	Radiocarbon dates associated with the end of the Middle Saxon complex Phase 2c	207
Table Appendix 3.1	NRM measurements of samples and measurements after partial AF demagnetisation for feature HF. J = magnitude of magnetisation vector; AF = peak alternating field strength of demagnetising field; R = sample rejected from mean calculation	228
Table Appendix 3.2	Incremental partial demagnetisation measurements for samples HF03, HF14 and HF25	228
Table Appendix 3.3	Assessment of the range of demagnetisation values over which each sample attained its maximum directional stability for feature HF, using the method of Tarling and Symons (1967). The declination and inclination values quoted are for the mean TRM direction for the sample calculated for all demagnetisation measurements in its range of maximum stability.	229

Summary

Between 1993 and 2003, Oxford Archaeology (formerly Oxford Archaeological Unit) undertook a major programme of survey and excavation on the northern outskirts of the town of Higham Ferrers, Northamptonshire, uncovering extensive remains dating from the Middle Bronze Age to the late medieval period. This volume deals with the Anglo-Saxon and medieval remains.

Post-Roman occupation began as early as the mid to late 5th century, with scatter of Sunken Featured Buildings and a few associated pits. No obvious evidence was found to indicate any continuity between the late Roman and early Saxon occupation.

A possible brief interval in the 7th century was followed by the establishment of a large 8th-century complex of enclosures and buildings, along with other structures including a large malting oven. It is argued that this represents the infrastructure of a purpose-built tribute centre for a royal estate, a type

of site not hitherto recognised in England. While the quantity of material evidence of this period is modest, the character of it indicates that a wide variety of produce came into complex and was then redistributed rather than consumed on site. Evidence of other functions of the complex were revealed in the form of human remains – interpreted as execution victims, found in parts of the enclosure ditches.

At around the end of the 8th century the evidence suggests that the complex was abruptly and completely destroyed and the landscape cleared. The chronology as determined by the material evidence was augmented by a programme of radiocarbon and archaeomagnetic dating.

Starting in the 9th century, occupation resumed in the area, in the form of a scatter of farmsteads. Evidence was also found of a substantial pottery industry producing Late medieval Reduced Ware.

Acknowledgements

Any project that extends over more than a decade of fieldwork and post-excavation is bound to draw on the services of many people.

Most importantly we are pleased to gratefully acknowledge the central part played by the Duchy of Lancaster throughout the project. It speaks volumes for Duchy's appreciation of heritage and the importance of archaeology that it supported the work so generously through the years, right up to and including this publication. The Duchy's initial representative was Ken Parsons, who helped formulate the initial project strategy. His successor, Roger Whalley, saw the archaeological project through the fieldwork stage – his cooperation, patience and forbearance in the face of the increasingly complicated archaeology (and the increasingly complicated archaeologists!) were crucial to the success of the project, and our thanks are profound. Roger was succeeded by Nick Dart, who has overseen the final stages of the project with similar understanding and support.

The cast of archaeologists involved in the projects is long and varied. The project was initiated by David Miles, then director of Oxford Archaeological Unit, and was initially managed by Bob Williams. The later stages of the fieldwork were managed by Alan Hardy. A number of Site Managers have been heavily involved; Klara Spandl, David Score, Steve Lawrence, Emily Glass and Gerry Thacker all deserve our appreciation for maintaining such high archaeological standards in what were sometimes very difficult circumstances.

On the curatorial side the East Northamptonshire Planning authority was initially represented by Glen Foard, who was the architect behind the formulation of a research strategy for the project, and contributed much to the formulation of working hypotheses during the excavations. Latterly, his successor, Myk Flitcroft coped with the increasingly complex project, deftly walking the tightrope between client and archaeologist, between what was and what was not possible, and making valuable contributions to the understanding of the site.

The post-excavation programme drew on the wisdom and skills of a number of people apart from those credited. John Blair and the late Patrick Wormald directed their talents to the Middle Saxon puzzle, ensuring that the archaeological interpretation could fit into the historical and political context of the time. Andrew Reynolds' help in unravelling the puzzle of the woman's burial is much appreciated. Last but not least, Helena Hamerow read the draft text and offered wise and valuable advice.

The original post-excavation programme included specialists' contributions that were superseded by later work. Nevertheless, the efforts of Umberto Albarella of Durham University and Matthew Canti of English Heritage are not forgotten.

The authors are pleased to express their thanks to three metal detectorists who participated over the years, Mick Gardener in the early days, and more recently Mark Davis and John Grey. They contributed significantly to the understanding of the site, demonstrating that it is possible for archaeologists and detectorists to work together for the common good.

Alan Hardy would like to personally thank Paul Blinkhorn and Steve Lawrence for their efforts above and beyond their formal obligations.

To an archaeologist it is always rewarding when the local community lend support to a project such as this. On the evidence of the number of local volunteer diggers (among whom John Richardson deserves a special mention), the attendance both at the site Open Days (one of which took place on one of the coldest days for years), and at the subsequent evening lectures, the community of Higham Ferrers is due a large vote of thanks for their support. Alan Hardy would particularly like to thank Olwen Mayes, of the Chichele Society for her inexhaustible enthusiasm and energy, maintaining the local interest in the site long after the digging stopped. Thanks must also go to Doreen Holyoak, for valuable information on the origin of Kings Meadow Lane.
