

Site/Project Name: **Environment Agency Flood Alleviation Scheme Watching brief**

Site Code: ENVA 99 & ENVA (G) 02

Site/Project Type: Watching brief

Year(s): 1999 & 2002

Accession Number: REDMG:1999.13

These watching briefs were carried out by Environment Agency with additional support from Oxford Archaeology. The records included here are all those held by Oxford archaeology and the watching briefs are part of the main Flood Alleviation Scheme reports.

## ARCHIVE INFORMATION

In 1996 & 1997 Oxford archaeological Unit (OAU) undertook a series of excavations on behalf of the National Rivers Authority as part of the works for the Windsor, Eton and Maidenhead flood alleviation scheme.

Also between 1990 & 2009 a second series of excavations took place on behalf of Eton College at Dorney Boveney Court in advance of construction and alterations to a rowing lake.

These projects have been written up in the following volumes of work:

Vol 1: Opening the wood, making the land: the archaeology of a Middle Thames Landscape; Mesolithic to earlier Bronze Age

Vol 2: Bridging the river, dividing the land; the archaeology of a Middle Thames landscape; middle Bronze Age to Roman periods

Vol. 3: Gathering the people, settling the land; the archaeology of a Middle Thames Landscape Anglo-Saxon to post-medieval.

The primary archives for each of the projects are separately archived under the following names and there are research archives of information from specialists created during the course of the post-excavation analysis which are archived under separate indexes.

Readers of the reports who which to use the archives are advised that they may need to consult several of the project archives. Each archive has been security copied by microfiching and copies lodged with the NMR. Each documentary archive is separately indexed and has an accompanying finds archive indexed under the same accession number.

NB some archives are to be deposited with Reading Museum (REDMG)

## **The Maidenhead, Windsor and Eton Flood Alleviation Scheme by Phil Catherall (EA) and Stuart Foreman (OAU)**

### **Project background**

The route of the Maidenhead, Windsor and Eton Flood Alleviation Scheme cuts a broad transect through the Middle Thames floodplain. Following an evaluation in 1991, a series of excavations were conducted on behalf of the Environment Agency in South Buckinghamshire and north-west Berkshire in 1996 and 1997 in advance of the scheme, involving archaeological excavation of some 15 hectares. The results of the work to date have been reported in recent newsletters (see Foreman, *SMA* 1998, 26-31). During 1999/2000 a watching brief was carried out along sections of the route of the scheme as well as excavation at Agars Plough.

### **Watching Brief on the Maidenhead, Windsor and Eton Flood Alleviation Scheme**

The watching brief revealed the extent of Bronze Age activity on the outer edge of the floodplain. A number of pits and/or ditches near Chalvey Ditch confirmed earlier work that had revealed sporadic features in the evaluation. However, the features were covered by alluvial deposits and were not visible after the topsoil strip and were only recorded (SU 955 792) where sections had been cut in the overburden in order to construct a haul road.

Late Bronze Age pits containing pottery and burnt flint were excavated at Widbrook Common, Cookham (SU 895 838).

A flint scatter was revealed close to the excavations at Roundmoor Ditch but did not appear to be associated with any features.

Another two unaccompanied cremation deposits, both plough-damaged, were discovered immediately to the north of excavations at Marsh Lane (SU 916 803), and could be part of a much larger dispersed cemetery.

On the west of Marsh Lane (SU 914 805) a number of flints, including an early Bronze Age barbed and tanged arrowhead and part of a middle Neolithic discoidal polished flint knife, were found after topsoil stripping, lying on top of an alluvial layer. Inspection of the site during the channel excavation revealed the remains of a buried ground surface, at least a metre below the stripped surface. However, inspection found this to be in poor condition and consequently it was not sampled. It appeared to be similar to the Mesolithic buried ground surfaces discovered at the nearby Eton Rowing Lake and from the depth of alluvium between the buried ground surface and the surface producing flintwork this seems probable.

### **Agars Plough excavation (SU 975 785)**

#### **Background**

The presence of a mid-late Iron Age settlement on the Agars Plough playing fields was clearly demonstrated at the evaluation stage of the archaeological project (work undertaken by Thames Valley Archaeological Services (TVAS)). A geophysical survey carried out subsequently by the Environment Agency Project Archaeologist (P Catherall), indicated the presence of a series of linear boundaries forming a 'ladder' settlement on a broadly east-west alignment, coinciding with the concentration of features and finds discovered by the evaluation trenching. The results indicated a concentration of activity on the Agars Plough playing field site with some continuation of linear features suggested to the east and west. The route of the channel was moved in order to avoid the densest concentration of archaeological features, and the 1999/2000 excavation was carried out to mitigate the impact of the realigned route on the eastern fringes of the occupation area.

### Results

A number of boundary ditches were exposed, running across the excavated areas, forming part of a series of rectilinear enclosures. Comparison with the geophysical survey of Agars Plough indicates that most of the linear features continue from the ladder settlement centred on the Agars Plough playing fields. Mid-late Iron Age pottery was recovered and, in contrast to the evaluation, there was evidence for occupation extending into the early Roman period.

The distribution of finds and features tends to confirm that the excavated site lies on the eastern edge of the settlement identified on the playing field. Features were present in all the excavated areas, but the majority of the artefacts and discrete features, such as pits and postholes, were found on the west side of the site, closest to Agars Plough. Excavation towards the east end of the site uncovered mainly linear features containing few artefacts, and revealed the eastern terminal of one 55 m wide enclosure. Two parallel ditches crossing the southern part of the site appear to represent the continuation of a track or droveway indicated by the geophysical survey as following, and possibly defining, the southern edge of the occupation area.

The depth of overburden varied considerably. Features at the southern end of the site were found immediately below the topsoil while those to the north were sealed by c 0.30 m of alluvium.

Pottery was recovered from 39 contexts, the majority of which are of late Iron Age date with some earlier prehistoric (Bronze Age and possibly middle Iron Age) and some early Roman material also present. Given the limited scale of excavation the pottery assemblage is comparatively large and suggests that any future excavation on the Agars Plough site would produce a sizeable assemblage. In addition to the pottery, worked flint was recovered (presumed to be residual in later contexts), as well as a few fragments of Roman tile and ironwork. Notable bone deposits include an animal burial, and a single human cremation was found at the southern end of the site.

**ENVAWB 99 - Environment Agency Watching Brief.**

**REDMG : 1999.13**

This assemblage was originally boxed in 3 Oxford Archaeology boxes. When preparing the site for deposition we have transferred the material to Reading Museum boxes.

The assemblage is now in 1 large Reading Museum box. (MISC.01)
