Commenced machining of infiltration drain A. Western end of drain contained Topsoil / collum / natural sequence which shallowed towards the east (upslope). Drain located on north side of proposed work (chainage: -4980 - 5220)

M/c trench approximately 0.30m wide and 1.5m deep excavated with toothed bucket with steel plate welded onto teeth, allowing soil to fall through remaining spaces between teeth.

Very difficult to see archaeological features.

COMMENTS

Commenced excavation of infiltration drain 'B' located on southern side of proposed works, western end (chainage :- 4700 ⇌ 4840)

Machinery encountered a series of deliberate infilling/levelling deposits of recent date at western end of trench.

Commenced excavation of infiltration drain 'C' located directly to the east of drain 'B'.

then machinery encountered topsoil, subsoil, natural sequence.

Drain 'C' chainage :- 4880 ⇌ 5080

Machine visibility poor, trench 0.30m wide x 1.50m deep.

COMMENTS

Continued to monitor excavation of drain 'c', soil sequence remained consistent :- topsoil & subsoil, not gravel. Final 30m of drain cut revealed dark redeposited topsoil directly above natural gravel. I suspect that all the deposits above the gravel seen within drain B+C are deliberate infilling/levelling events.

Area between drain B+C excavated, linking the two. This truncated the N-S aligned trackway visible in the present landscape. Track constructed of chalk at base, overlain by flint gravel which was in turn overlain by black ash/clinker. Total thickness around 0.70m. Underlying deposits appeared

to continue uninterrupted beneath trackway

STRATIGRAPHIC MATRIX

Interpretation/Discussion

Deposit of sterile sandy silt, possibly colluvium/
 Single piece of C.B.M. found at eastern end of trench,
 where deposit is seen to overlie a dark soil (possibly
 topsoil derived). This deposit could therefore represent
 a deliberate infilling/levelling deposit. Deposit is
 thought to continue beneath N-S trackway seen to cross
 site (see WB record dated 27/09/06)

Interpretation/Discussion

CUT THOUGHT TO BE THAT OF A DITCH ALTHOUGH ONLY CLEARLY APPEARS IN THE SOUTH FACING SECTION WITHIN THE INFILTRATION DRAIN TRENCH. TRACES ARE VISIBLE IN THE NORTH-FACING SECTION BUT THE PROFILES ARE FAR FROM SYMMETRICAL. THEREFORE IT CAN'T BE RULED OUT AS A PIT.
