Summary

In August and September 2019 Oxford Archaeology was commissioned by Pegasus Group on behalf of Kingacre Estates Ltd to carry out a trial trench archaeological evaluation of the site of a proposed urban extension at Land South of Wokingham. Previous archaeological work in the general area had revealed low level and dispersed evidence of prehistoric, Roman and post-medieval agricultural activity.

The evaluation confirmed the results of previous archaeological investigations in the locality, revealing infilled field boundaries or an absence of archaeological features across much of the site. There were two exceptions to this trend. Trenches 33, 35 and 36 contained a number of ditches on different alignments to the surrounding field systems but produced no finds and remain undated. Trenches 94, 97, 98, 101 and 102 contained a dispersed mix of ditches, pits and postholes indicating the presence of low-density settlement activity.

Acknowledgements

Oxford Archaeology would like to thank Pegasus Group for commissioning this project on behalf of Kingacre Estates Ltd. Thanks are also extended to Fiona Macdonald who monitored the work on behalf of Berkshire Archaeology.

The project was managed for Oxford Archaeology by Richard Brown. The fieldwork was directed by Robert M^cIntosh, who was supported by Camille Guezennec, Chris Richardson, Mariusz Gorniak, Tom Black, Chris Pickard, Sarah Peacop, Ben M^cAndrew, Emma Powell and Emma Winter. Survey and digitising was carried out by Conan Parsons and Simon Batsman. Thanks are also extended to the teams of OA staff that cleaned and packaged the finds under the supervision of Leigh Allen, processed the environmental remains under the supervision of Sharon Cook, and prepared the archive under the supervision of Nicola Scott.

1 INTRODUCTION

1.1 Scope of work

- 1.1.1 Oxford Archaeology (OA) was commissioned by Pegasus Group on behalf of Kingacre Estates Ltd to undertake a trial trench evaluation at the site of a proposed urban extension to the south of Wokingham. Ninety-five trenches were excavated in order to assess the archaeological potential of the area.
- 1.1.2 The work was undertaken to inform an application for South Wokingham Strategic Development Location (SDL) urban extension. A specification was set by Fiona MacDonald, Archaeological Advisor Berkshire Archaeology, and a written scheme of investigation was produced by Pegasus Group detailing the Local Authority's requirements for work necessary to inform the planning process.
- 1.1.3 This document outlines how OA implemented the specified requirements.

1.2 Location, topography and geology

- 1.2.1 The site lies to the south-east of Wokingham, south of the railway and north of Gardens Green (Fig.1). It lies either side of both Easthampstead Road and Waterloo Road, centered on SU 82660 67717.
- 1.2.2 The area of proposed development is largely flat and consists of a mixture of pastoral and agricultural land, spread over twenty fields. It is situated at c 67m AOD at the east of the site and at c 56m AOD at the west end of site.
- 1.2.3 The geology of the area is mapped as London clay, with Bagshot Formation Sand deposits present along the western and eastern site margins. Superficial head deposits are present at lower elevations within the western part of the site, and two discrete lobes of river terrace sand and gravel deposits are present within the eastern part of the site.

1.3 Archaeological and historical background

- 1.3.1 The Site has been subject to Heritage Desk-Based Assessment (Pegasus Group 2018) Geophysical Survey and previous targeted trial trench evaluations by Cotswold Archaeology (CA 2018) and AOC Archaeology (AOC 2017) along the course of a proposed link road within the Site.
- 1.3.2 In summary, two Areas of 'High Archaeological Potential' identified by Wokingham Borough Council (WBC) are partially located within the Project Site. One is associated with undated cropmarks located beyond the Project Site boundary. The other is associated with below-ground remains of a field system of possible Roman origin, an area of ridge and furrow earthworks and a small number of find spots including prehistoric flint and Roman and medieval pottery fragments.
- 1.3.3 The local geology was found not to be conducive to Geophysical (magnetometer) Survey. The 2018 targeted trial trench evaluation by Cotswold Archaeology along the course of the Southern Distributor Road (SDR) within the northern aspect of the Site

comprised the excavation of 128 trenches. No remains of high archaeological significance were identified, only evidence for Romano-British agricultural activity in the form of field system and enclosures, and one middle Iron Age pit which contained iron working debris.

- 1.3.4 An earlier eight trial trench evaluation located to the east of the SDR was undertaken in 2016 by AOC Archaeology. This revealed a series ditches and gullies indicative of a managed agricultural landscape, which were assumed to be Roman in date (AOC 2017).
- 1.3.5 Increased potential for archaeological remains towards the east of the application area is indicated both by the previous evaluations and the presence of a settlement site at Jennett's Park (Simmonds *et al.* 2009) c 1km to the east of the application area boundary where excavation revealed evidence of Mesolithic and Bronze Age activity, followed by the establishment of a settlement during the middle Iron Age. This farmstead continued in use into the late Iron Age when a complex of field boundary ditches was established but was abandoned just before the start of the Roman period. The complex of boundary ditches continued in use up until the early 2nd century.

2 AIMS AND METHODOLOGY

2.1 Aims

2.1.1 The project aims and objectives were as follows:

- i. To evaluate the site's archaeological potential, and determine the significance of any buried archaeological remains, sufficient to inform a planning decision in respect of the South Wokingham SDL application.
- ii. To evaluate the depth, extent, character and date of any archaeological remains revealed.
- iii. To recover and record a proportionate sample of any artefacts and palaeo-environmental remains revealed.
- iv. To undertake a proportionate program of post-excavation analysis.
- v. To compile a suitably detailed report presenting the results of the evaluation.
- vi. To compile a material and documentary archive, and deposit that archive with a suitable repository.

2.2 Methodology

- 2.2.1 The Pegasus WSI allowed for 139 trenches across the proposed scheme. Due to access constraints these were (agreed in correspondence between Pegasus and the archaeological planning advisor) reduced to one hundred and nine proposed trenches (Fig 2) prior to fieldwork and thereafter ninety-six completed. Fourteen were not excavated due to a mixture of access problems (Trenches 1, 2, 3, 40, 55, 56, 57, 58, 59, 95), including Trenches 87, 88, 108 and 109 which were not possible due the proximity to ponds containing Great Crested Newts. Of the ninety-six trenches that were excavated nineteen had to be moved or shortened due to local conditions on site, i.e. trees, hedges, fence lines, crops or flooding. Trench 33 (Fig.7) had two short extensions added on to it at the request of the archaeological advisor. These consisted of a 3.6m x 1.8m extension to the east and a 4.4m x 1.8m extension to the west.
- 2.2.2 In all trenches, topsoil and subsoil was removed by a mechanical excavator using a toothless ditching/grading bucket under constant archaeological supervision. Topsoil and subsoil was separated and placed a safe distance to either side of the trench. Overburden was removed until the natural geology or archaeological horizon was revealed.
- 2.2.3 Revealed features were assessed through hand excavation sufficient to establish their character.
- 2.2.4 Trenches were recorded via photography and a written description on trench sheets. Features were recorded via photography, appropriately scaled drawings, context sheets and levels. Where encountered finds were collected and recorded by context, and environmental bulk samples were taken where appropriate.

3 RESULTS

3.1 Introduction and presentation of results

3.1.1 The results of the evaluation are presented below and include a stratigraphic description of the trenches that contained archaeological remains. The full details of all trenches with dimensions and depths of all deposits can be found in Appendix A. Finds data and spot dates are tabulated in Appendix B.

3.2 General soils and ground conditions

3.2.1 The soil sequence in the trenches was fairly uniform. The natural geology of yellow clay with patches of gravel or yellow silty sand with patches of gravel was overlain by a sandy silt subsoil, which in turn was overlain by topsoil. The vast majority of trenches were between 0.3 and 0.4 meters in depth.

3.2.2 Ground conditions throughout the evaluation were generally good, and the site remained dry throughout. Archaeological features, where present, were easy to identify against the underlying natural geology.

3.3 General distribution of archaeological deposits

3.3.1 Archaeological features were present in trenches 7, 13, 15-16, 26, 29, 31-37, 94, 97-98 and 101-102. All other trenches were devoid of archaeology.

3.4 Trenches 7 (Fig.3 and 4, Plate 1)

3.4.1 Trench 7 contained a ditch (705) running northeast–southwest, it contained no dateable finds. It had a flat base, steep sloping sides and two fills.

3.5 Trench 13 (Fig.3 and 4, Plate 2)

3.5.1 Trench 13 contained three linear features (1304, 1306 and 1307) all running northeast–southwest, parallel and close to each other. The southernmost linear feature (1303) was very shallow and contained no finds. The middle linear feature (1306) was a small ditch with no finds but contained a later 19th-20th century land drain on its base. It had steep sides, a flat base and one fill. The northernmost linear (1307) remained unexcavated but had modern wood and ceramic tile in the top.

3.6 Trench 15 (Fig.3)

3.6.1 One small ditch (1503), running northeast–southwest was located in Trench 15. It had a sloping southeast edge leading down to a ceramic land drain and modern ceramic tile identical to that found in 1307, the other edge and base were not exposed in the excavation.

3.7 Trench 16 (Fig.3)

3.7.1 Trench 16 contained one ditch (1603) running northwest–southeast which remained unexcavated. It contained a ceramic land drain, no finds, and lined up with ditch 1306 in trench 13.

3.8 Trench 26 (Fig.5 and 6)

3.8.1 Trench 26 contained one ditch (2604) and a large area of disturbance (2606, 2608, 2610 and 2612). Ditch 2604 was large and ran east-west, it contained a pot sherd (dated 1720-1780), 19th century brick and clay tobacco pipe (dated 18th to 19th century). Some 3.8m of the ditch's width was exposed in the trench, it had gently sloping sides, a flat base and a single fill. Features 2606, 2608, 2610 and 2612 together represent one large area of disturbance 10m across. All of the features contained post medieval ceramic building material (CBM).

3.9 Trench 28 (Fig.5 and 6, Plates 5 & 6)

3.9.1 Trench 28 contained a small and shallow ditch (2803) with no datable finds in it. The ditch was aligned north-south, and had sloping sides, an irregular base and a single fill.

3.10 Trench 29 (Fig.5 and 6)

3.10.1 A tree root hollow (2904) was situated at the southern end of Trench 29 and a ditch (2906) at the northern end. Ditch 2906 had sloping sides and a flat base, it was aligned east-west and contained no finds. The ditch fill (2905) was a compact, light grey silty sand and very similar to the natural.

3.11 Trench 31 (Fig.5 and 6, Plate 7)

3.11.1 Trench 31 contained a medium sized ditch running north-south and a small tree root hollow. Neither feature contained any finds. Ditch 3106 had steep sloping sides, a concave base and contained a single dark brown sandy silt fill.

3.12 Trench 32 (Fig.7 and 8)

3.12.1 Trench 32 contained one feature, 3203, but upon excavation it was revealed to be a tree root hollow. It contained no finds.

3.13 Trench 33 (Fig.7 and 8, Plate 8)

3.13.1 The trench contained three features, two linear and one curvilinear ditch. The southernmost ditch (3304) was aligned east-west, and measured 0.96m wide and 0.25m deep. It had steep sides and a flat base and contained a single compact fill of light grey silty sand, which produced a pot sherd of uncertain date, either Anglo Saxon or possibly prehistoric, and a fragment of bone. The northernmost ditch (3308) was aligned east-west and continued into trench 34 (3404). It was 0.95 wide, 0.34m deep and had a flat base and steep sides. Its single loose fill of dark brown sandy silt contained no finds. The final ditch/gully (3306) was located between 3304 and 3308 and curved from pointing west to southeast. It formed a shallow V shaped gully containing a firm light grey sandy silt fill without finds. Notably Trench 33 lies within c 50 m of Trench 108 of the Cotswold Archaeology investigation which contained Middle Iron Age pottery, seven fragments of fired clay and three items of metal working debris, indicating possible evidence of ironworking (CA 2018).

3.14 Trench 34 (Fig.7 and 8, Plate 9)

3.14.1 Trench 34 contained one east-west orientated ditch (3404), which lines up with and has a similar shape to 3308 in trench 33. It had steep sides, a flat base and contained a loose greyish brown silty sand (3403).

3.15 Trench 35 (Fig.9 and 10, Plates 10 & 11)

3.15.1 The trench contained one large northeast-southwest aligned ditch with one to two recuts, the ditch and recuts together were 2.1m in width. Two earlier ditches (3503, 3507) were truncated by recut 3505. Ditches 3503 and 3507 may be the same feature, as they both had similar profiles of sloping sides and flat base and friable light grey, yellow mottled fills. The recut (3505) had steep sloping sides and a flat base, it was 0.95m wide and 0.4m deep, its single fill was a soft, dark grey, silty sand. No finds were recovered from any of these features.

3.16 Trench 36 (Fig.9 and 10, Plate 12)

3.16.1 Trench 36 contained two ditches and one posthole. The northernmost ditch (3613) was aligned east-west, had a V shaped profile with sloping sides and a concave base. It was 0.5m wide, 0.32m deep and had a single compact light grey silty sand fill with no finds. Ditch 3603 was aligned northwest-southeast with seven fills, although no obvious recuts. No finds were recovered from the ditch. It had sloping sides, a wide flat base and all its fills were friable sandy silts. The posthole (3611) was oval in shape, with moderately sloping sides and a concave base, its single fill was a compact, light grey silty sand, which contained no finds.

3.17 Trench 37 (Fig.9 and 10)

3.17.1 Trench 37 contained one north-south aligned ditch. It had steep sides, a concave base and was 1.5m wide and 0.24m deep. Its single loose, dark grey silty sand fill contained no finds.

3.18 Trench 94 (Fig.11 and 12)

3.18.1 Trench 94 contained two discrete features, one tree bole and one pit. The tree bole (9403) was an irregular oval with a soft charcoal rich fill, and no finds. Pit 9405 was sub-ovoid 0.8m x 0.75m, and 0.1m deep, it had irregular sides and base. It contained two fills, an upper fill (9406) which was a soft dark brownish grey silty clay with some charcoal flecks. Its lower fill (9407) was a dark reddish brown silty clay. Neither feature contained any finds.

3.19 Trench 97 (Fig.11 and 12, Plate 13)

3.19.1 The trench contained one north - south aligned gully. The gully (9703) had sloping sides and a concave base and measured 0.36m in width and 0.16m in depth. It had a single fill which was a firm brownish grey silty clay with orange mottling and it contained a piece of post-medieval CBM.

3.20 Trench 98 (Fig.11 and 12, Plate 14)

3.20.1 Trench 98 contained one gully, one posthole and one pit located at the north end of the trench. A fourth oval feature (9808), possibly a second posthole remained unexcavated. The gully (9802) was meandering in plan and had sloping sides and a concave base; it measured 0.15m in width and 0.06m in depth. Its single fill was friable, light greyish brown sandy clay with orange mottles. It contained no finds. Posthole 9804 was sub-circular with steep sloping sides and a concave base and contained a friable light greyish brown sandy clay with yellow mottling. Pit (9806) appeared circular but was only partially visible in the trench. It had a sloping stepped side and a concave base and measured 1.2m wide by 0.2m deep. It contained no finds.

3.21 Trench 101 (Fig.13 and 14, Plate 15)

3.21.1 Trench 101 contained one posthole at the northeast end of the trench. The posthole (10103) was ovoid in shape with steep sloping sides and a concave base. Its single fill was a firm dark brownish grey silty clay and contained no finds.

3.22 Trench 102 (Fig.13 and 14, Plate 16)

3.22.1 Trench 102 contained one ditch (10203) orientated northeast-southwest. It was 0.5m wide and 0.3m deep with an asymmetric V-shaped profile. Its single fill was a firm brownish grey silty clay with no finds.

3.23 Finds summary

3.23.1 Very little in the way of finds were recovered from the features encountered, the majority being post medieval CBM from the features in Trench 26. The only exception to this is a single sherd of Anglo-Saxon or potentially prehistoric pottery from ditch 3304 in Trench 33.

4 DISCUSSION

4.1 Reliability of field investigation

- 4.1.1 A fair spatial coverage of the site was achieved with the trenches, and the results should be considered to be a reliable reflection of the archaeological potential of the site. In all areas of the evaluation the natural geology encountered was very distinct from the overlying soils, and features where encountered were very obvious. Weather conditions were good throughout the project and did not impact visibility.

4.2 Evaluation objectives and results

- 4.2.1 The aims and objectives of the evaluation are detailed above within Section 2. The trenching successfully identified archaeological remains in two distinct areas, centred on Trenches 35 and 98, and confirmed a lack of archaeological potential in much of the rest of the site.

4.3 Interpretation

- 4.3.1 The features identified in the evaluation can be grouped into four broad areas. All other areas were entirely devoid of archaeological features. This is consistent with the results of the Evaluation along the route of the SDR where the vast majority of the 128 trenches were sterile, with no finds, features or deposits of note, except for a single middle Iron Age pit located towards the eastern end of the SDR route (CA 2018).

Trenches 7, 13, 15 and 16

- 4.3.2 These trenches were all located in one field in the southwest of the evaluation and contained six ditches, all of a similar character. As a number contained modern finds, ceramic land drains and the ditches follow similar or the same alignments as the existing modern field boundaries these would seem to represent the relatively modern field system that existed before it was cleared to create the larger modern fields that exist now.

Trenches 26, 28, 29, 31, 33, 34, 36 and 37

- 4.3.3 These trenches all lie within one large field in the centre of the evaluation, and are characterised by the presence of ditches on north-south or east-west alignments. These alignments are the same as the modern field boundaries and the features likely represent boundaries infilled during the opening up of smaller field plots. Finds from the features in Trench 26 were of post medieval date.
- 4.3.4 A single pot sherd from Trench 33 (context 3303) could not be differentiated between Anglo-Saxon or possibly prehistoric date. These ditches clearly represent field systems. The pot sherd is likely to be residual in context (ditch fill) but may be notable in relation to the vicinity of the trench to Trench 108 of the Cotswold Archaeology which contained evidence of Middle Iron Age occupation (CA 2018) and the undated features described below which do not conform to field boundary orientations. Flots from the sample taken from the ditch in contained charcoal and modern uncharred seeds along with a single badly damaged charred oat/brome.

Trenches 33, 35 and 36

4.3.5 These trenches are all located in the same large field in the centre of the evaluation as above, but are all clustered to the very eastern edge of the field. These trenches contained between them a northwest-southeast ditch, a northeast-southwest ditch and a curvilinear ditch. None of these features contained any finds for dating, but that they are not on the north-south, east-west alignment of both the modern field boundaries and earlier field system found in the same field. This may indicate an earlier, potentially prehistoric, enclosure.

Trenches 94, 97, 98, 101 and 102

4.3.6 These trenches are all located in the centre and north of one large field in the northeast of the evaluation. The trenches contain a mixture of small ditches, postholes and pits. The only finds coming from a ditch in Trench 97 and have been dated to the post-medieval period. This cluster of features indicates some low level settlement activity.

4.3.7 A pit in Trench 94 (Pit 9405, Fill 9406) and a ditch in Trench 97 (Ditch 9703, Fill 9704) were bulk sampled. Both flots contained charcoal, whilst the flot from Trench 97 also contained occasional uncharred seeds.

4.4 Significance

4.4.1 The evaluation has indicated minimal archaeological presence across most of the evaluation. There are two notable exceptions to this, the first is a cluster of possible prehistoric features just to the west of Brittons Farm, possibly representing a small enclosure, coupled with a field system. These features lie c 50 m to the south of prehistoric remains identified in the Cotswold Archaeology evaluation (CA 2018).

4.4.2 The second is another cluster of features in the northeast of the evaluation area that may indicate an area of low level settlement activity. These features are similar to those belonging to a mid to late Iron Age settlement at Jennett's Park to the east of the Site (Simmonds et al 2009). They could represent a continuation of the Jennett's Park settlement and its associated late Iron Age-Roman field boundary complex.

APPENDIX A TRENCH DESCRIPTIONS AND CONTEXT INVENTORY

Trench 4						
General description					Orientation	NW-SE
Trench devoid of archaeology. Consists of topsoil and subsoil overlying natural geology of sandy clay. The trench was moved SE 5m due to the presence of a fence.					Length (m)	26
					Width (m)	1.8
					Avg. depth (m)	0.38

400	Layer	-	0.26	Topsoil, dark greyish brown sandy silt	-	-
401	Layer	-	0.12	Subsoil, medium to dark yellowish brown silty clay	-	-
402	Layer	-	-	Natural, orangey brown sandy clay with grey patches, some stones	-	-

Trench 5						
General description					Orientation	NE-NW
Trench devoid of archaeology. Consists of topsoil and subsoil overlying natural geology of sandy clay with gravelly patches. Trench moved 15m NE and 2m NW so as not to block access gate.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.32
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
500	Layer	-	0.22	Topsoil, dark greyish brown sandy silt	-	-
501	Layer	-	0.1	Subsoil, medium to dark yellowish brown silty clay	-	-
502	Layer	-	-	Natural, yellowish brown sandy clay with some gravel patches	-	-

Trench 6						
General description					Orientation	NW-SE
Trench devoid of archaeology. Consisted of topsoil overlying natural geology of silty clay. Trench moved east and shortened due to crops and flooding.					Length (m)	12
					Width (m)	6
					Avg. depth (m)	0.48
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
600	Layer	-	0.48	Topsoil, dark greyish brown clayey silt	-	-
601	Layer	-	-	Natural, orangey brown, silty clay with greyish brown patches	-	-

Trench 7						
----------	--	--	--	--	--	--

General description					Orientation	SE-NW
Trench contained one linear. Consists of topsoil and subsoil overlying natural geology of sandy silt.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.29
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
700	Layer	-	0.12	Topsoil, greyish brown clay	-	-
701	Layer	-	0.17	Subsoil, light brown sandy clay	-	-
702	Layer	-	-	Natural, orangey brown sandy silt	-	-
703	Fill	0.54	0.2	Upper fill of 705. Firm, brown sandy silt	-	-
704	Fill	0.54	0.18	Lower fill of 705. Firm, light grey sandy silt	-	-
705	Ditch	0.54	0.34	NE-SW linear, steep sides, flat base. Two fills	-	-

Trench 8						
General description					Orientation	NE-SW
Trench devoid of archaeology. Consists of topsoil and subsoil overlying natural geology of sandy clay.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.40
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
800	Layer	-	0.28	Topsoil, medium to dark greyish brown sandy silt	-	-
801	Layer	-	0.12	Subsoil, yellowish brown sandy clay	-	-
802	Layer	-	-	Natural, brownish orange sandy clay, with pockets of stones	-	-

Trench 9						
General description					Orientation	SE-NW
Trench devoid of archaeology. Consists of topsoil and subsoil overlying natural geology of sandy clay.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.32
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
900	Layer	-	0.24	Topsoil, medium to dark greyish brown sandy silt	-	-
901	Layer	-	0.08	Subsoil, yellowish brown sandy clay	-	-
902	Layer	-	-	Natural, orangey brown sandy clay, frequent stones	-	-

Trench 10						
General description					Orientation	SE-NW

Trench devoid of archaeology. Consists of topsoil and subsoil overlying natural geology of sandy clay.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.28
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
1000	Layer	-	0.18	Topsoil, dark greyish brown sandy silt	-	-

1002	Layer	-	-	Natural, orangey brown sandy clay, with grey patches and some stones	-	-

Trench 11						
General description					Orientation	NW-SE
Trench devoid of archaeology. Consists of topsoil and subsoil overlying natural geology of sandy clay. The trench was moved southeast due to crops.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.45
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
1100	Layer	-	0.25	Topsoil, dark greyish brown clayey silt	-	-
1101	Layer	-	0.20	Subsoil, orangey brown silty clay	-	-
1102	Layer	-	-	Natural, light greyish yellow sandy clay	-	-

Trench 12						
General description					Orientation	NW-SE
Trench devoid of archaeology. Consists of topsoil overlying natural geology of silty clay.					Length (m)	20
					Width (m)	1.6
					Avg. depth (m)	0.4
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
1200	Layer	-	0.40	Topsoil, dark greyish brown clayey silt	-	-
1201	Layer	-	-	Natural, yellowish orange silty clay with small stone inclusions	-	-

Trench 13						
General description					Orientation	NE-SW
Trench contained three linear features. Consists of topsoil and subsoil overlying natural geology of sandy clay.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.34
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
1300	Layer	-	0.26	Topsoil, dark greyish brown sandy silt	-	-

1301	Layer	-	0.08	Subsoil, yellowish brown sandy clay	-	-
1302	Layer	-	-	Natural, orangey brown sandy clay, some grey lenses	-	-
1303	Fill	1.9	0.05	Fill of 1304. Firm greyish brown sandy silt	-	-
1304	Hedge-line	1.9	0.05	NW-SE linear. Shallow edges, flat base. Single fill	-	-
1305	Fill	1.25	0.4	Fill of 1306. Firm dark brown sandy silt	-	-
1306	Ditch	1.25	0.4	NW-SE linear. Sloping sides flat base. Single fill	-	-
1307	Linear	2.25	-	Unexcavated NW-SE linear. Firm greyish brown sandy silt fill	-	-

Trench 14						
General description					Orientation	NE-SW
Trench devoid of archaeology. Consists of topsoil and subsoil overlying natural geology of sandy clay.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.30
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
1400	Layer	-	0.16	Topsoil, dark greyish brown sandy silt	-	-
1401	Layer	-	0.14	Subsoil, yellowish brown sandy clay	-	-
1402	Layer	-	-	Natural, orangey brown sandy clay, frequent stones	-	-

Trench 15						
General description					Orientation	N-S
Trench contained one linear. Consists of topsoil and subsoil overlying natural geology of sandy clay.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.36
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
1500	Layer	-	0.26	Topsoil, dark greyish brown sandy silt	-	-
1501	Layer	-	0.10	Subsoil, medium to dark yellowish brown sandy silt	-	-
1502	Layer	-	-	Natural, yellowish grey sandy clay, frequent stones	-	-
1503	Ditch	1.7	0.2	NE-SW linear. Sloping sides, base unseen. One fill	-	20 th C
1504	Fill	1.7	0.2	Fill of 1503. Firm greyish brown sandy silt, patches of stones. Contained land	-	20 th C

				drain and modern bathroom tiles.		
1505	Layer	6	0.18	Firm light greyish brown sandy silt, frequent pebbles and fired clay flecks. Only in north of trench, overlying 1504.	-	20thC

Trench 16						
General description					Orientation	NE-SW
Trench contained one linear. Consists of topsoil and subsoil overlying natural geology of sandy clay.					Length (m)	29
					Width (m)	1.8
					Avg. depth (m)	0.30
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
1600	Layer	-	0.18	Topsoil, dark greyish brown sandy silt	-	-
1601	Layer	-	0.12	Subsoil, yellowish brown sandy clay	-	-
1602	Layer	-	-	Natural, orangey brown sandy clay, patches of stones	-	-
1603	Ditch	-	-	Unexcavated NW-SE ditch. Same as 1306 in trench 13. Medium to dark greyish brown sandy silt.	-	-

Trench 17						
General description					Orientation	NE-SW
Trench devoid of archaeology. Consists of topsoil and subsoil overlying natural geology of sandy clay with gravel patches.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.3
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
1700	Layer	-	0.20	Topsoil, dark greyish brown clayey silt	-	-
1701	Layer	-	0.10	Subsoil, brownish grey clayey silt	-	-
1702	Layer	-	-	Natural, orangey grey sandy clay with gravel patches and one outcrop of stone.	-	-

Trench 18						
General description					Orientation	NW-SE
Trench devoid of archaeology. Consists of topsoil and subsoil overlying natural geology of silty sand.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.4

Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
1800	Layer	-	0.40	Topsoil, dark greyish brown clayey silt	-	-
1801	Layer	-	0.10	Subsoil, brownish grey clayey silt	-	-
1802	Layer	-	-	Natural, yellowish orange silty sand with grey patches	-	-

Trench 19						
General description					Orientation	E-W
Trench devoid of archaeology. Consists of topsoil and subsoil overlying natural geology of silty clay.					Length (m)	28
					Width (m)	1.8
					Avg. depth (m)	0.5
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
1900	Layer	-	0.40	Topsoil, dark greyish brown clayey silt	-	-
1901	Layer	-	0.10	Subsoil, brownish grey silty clay	-	-
1902	Layer	-	-	Natural, yellowish orange silty clay	-	-

Trench 20						
General description					Orientation	NE-SW
Trench devoid of archaeology. Consists of topsoil overlying a natural geology of sandy silt with silty clay patches.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.3
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
2000	Layer	-	0.30	Topsoil, dark greyish brown clayey silt	-	-
2001	Layer	-	-	Natural, light greyish yellow sandy silt with greyish brown patches of silty clay	-	-

Trench 21						
General description					Orientation	NW-SE
Trench devoid of archaeology. Consists of topsoil and subsoil overlying natural geology of pebbly gravel with sand patches.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.35
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
2100	Layer	-	0.2	Topsoil, greyish brown sandy clay	-	-
2101	Layer	-	0.12	Subsoil, yellowish brown sandy silt	-	-

2102	Layer	-	-	Natural, pebbly gravel with patches of yellow sand	-	-
------	-------	---	---	--	---	---

Trench 22						
General description					Orientation	NE-SW
Trench devoid of archaeology. Consists of topsoil and subsoil overlying natural geology of sand, with gravel patches.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.40
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
2200	Layer	-	0.28	Topsoil, greyish brown clay	-	-
2201	Layer	-	0.15	Subsoil, light grey sandy silt with gravelly patches	-	-
2202	Layer	-	-	Natural, light greyish orange sand with gravelly patches	-	-

Trench 23						
General description					Orientation	E-W
Trench devoid of archaeology. Consists of topsoil and subsoil overlying natural geology of sand. Trench shortened at east end due to obstructions in the field.					Length (m)	28
					Width (m)	1.8
					Avg. depth (m)	0.28
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
2300	Layer	-	0.24	Topsoil, greyish brown silty sand	-	-
2301	Layer	-	0.04	Subsoil, yellowish grey sand with frequent pebbles, patchy	-	-
2302	Layer	-	-	Natural, pebbly gravel with patches of yellowish grey sand	-	-

Trench 24						
General description					Orientation	N-S
Trench devoid of archaeology. Consists of topsoil and subsoil overlying natural geology of silty clay, with patches of gravel.					Length (m)	28
					Width (m)	1.8
					Avg. depth (m)	0.30
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
2400	Layer	-	0.26	Topsoil, loose greyish brown silty clay	-	-
2401	Layer	-	0.04	Subsoil, firm light brown silty clay	-	-
2402	Layer	-	-	Natural, orange silty clay with patches of pebbly gravel	-	-

Trench 25						
-----------	--	--	--	--	--	--

General description					Orientation	E-W
Trench devoid of archaeology. Consists of topsoil and subsoil overlying natural geology of sandy silt in the west half, pebbly sand in the eastern half.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.37
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
2500	Layer	-	0.26	Topsoil, greyish brown sandy clay	-	-
2501	Layer	-	0.11	Subsoil, light grey sandy silt, patches of pebbly gravel	-	-
2502	Layer	-	-	Natural, orange sandy silt in west half, grey pebbly sand in east half	-	-

Trench 26						
General description					Orientation	N-S
Trench contained five post medieval features, one a ditch the other four tree disturbance. Consists of topsoil and subsoil overlying natural geology of silty sand with patches of gravel.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.24
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
2600	Layer	-	0.16	Topsoil, dark greyish brown sandy silt	-	-
2601	Layer	-	0.08	Subsoil, greyish brown sandy silt	-	-
2602	Layer	-	-	Natural, patchy orange and grey silty sandy with gravel patches	-	-
2603	Fill	0.4	0.26	Fill of 2604. Firm light grey brown sandy silt, occasional gravel	Pot sherds, CBM, Clay tobacco pipe	19 th C
2604	Ditch	3.8	0.4	E-W ditch at north end of trench. Shallow sloping sides, flat base. Single fill	-	19 th C
2605	Fill	0.6	0.24	Fill of 2606. Loose grey brown sandy silt, with yellow patches	CBM	19 th C
2606	Tree disturbance	0.6	0.24	NE-SW linear. Steep slopes, V shaped base. Single fill	-	19 th C
2607	Fill	0.6	0.12	Fill of 2608. Firm greyish brown silty sand, patches of sandy gravel and redeposited natural	CBM	19 th C
2608	Tree disturbance	2	0.12	NE-SW linear. Irregular sides and base. Single fill	-	19 th C

2609	Fill	2.1	0.3	Fill of 2610. Firm light greyish brown silty sand, some gravel	CBM	19 th C
2610	Tree disturbance	2.1	0.3	Irregular in plan, sides and base. Single fill	-	19 th C
2611	Fill	2	0.22	Fill of 2612. Loose, greyish brown with bands of yellow, silty sand and gravel	-	19 th C
2612	Tree disturbance	2	0.22	NE-SW linear. Near vertical sides, flat base. Single fill	-	19 th C

Trench 27

General description					Orientation	E-W
Trench devoid of archaeology. Consists of topsoil and subsoil overlying natural geology of silty sand, patches of gravel.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.32
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
2700	Layer	-	0.22	Topsoil, dark greyish brown sandy silt	-	-
2701	Layer	-	0.10	Subsoil, yellowish greyish brown sandy silt	-	-
2702	Layer	-	-	Natural, orange and grey silty sand, patches of gravel	-	-

Trench 28

General description					Orientation	E-W
Trench contained one linear feature. Consists of topsoil and subsoil overlying natural geology of silty sand.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.38
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
2800	Layer	-	0.20	Topsoil, dark greyish brown sandy silt	-	-
2801	Layer	-	0.18	Subsoil, yellowish brown sandy silt	-	-
2802	Layer	-	-	Natural, patchy orange and grey silty sand with patches of pebbles	-	-
2803	Ditch	0.86	0.19	N-S linear, moderate sloping sides and irregular base. One fill	-	-
2804	Fill	0.86	0.19	Fill of 2803. Firm, medium to dark greyish brown sandy silt, some pebbles	-	-

Trench 29

General description					Orientation	29
Trench contained two features, a linear feature and a probable tree throw. Consists of topsoil and subsoil overlying natural geology of pebbly sand, with silty sand patches.					Length (m)	50
					Width (m)	1.8
					Avg. depth (m)	0.39
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
2900	Layer	-	0.29	Topsoil, greyish brown sandy clay	-	-
2901	Layer	-	0.11	Subsoil, light grey silty sand, patches of pebbles	-	-
2902	Layer	-	-	Natural, light grey pebbly sand, with patches of orange silty sand	-	-
2903	Fill	0.6	0.2	Fill of 2904. Loose, dark grey silty sand	-	-
2904	Tree throw	0.6	0.2	Sub-rectangular in plan. Steep sloping sides, flat base. Single fill	-	-
2905	Fill	1	0.18	Fill of 2906. Firm, light grey silty sand	-	-
2906	Ditch	1	0.18	E-W linear feature. Sloping sides, flat base. Single fill	-	-

Trench 30						
General description					Orientation	NW-SE
Trench devoid of archaeology. Consists of topsoil and subsoil overlying natural geology of silty sand, with gravelly patches.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.28
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
3000	Layer	-	0.18	Topsoil, dark greyish brown sandy silt	-	-
3001	Layer	-	0.10	Subsoil, yellowish brown sandy silt	-	-
3002	Layer	-	-	Natural, patchy orange and grey silty sand with gravel patches	-	-

Trench 31						
General description					Orientation	W-E
Trench contained two features, a linear feature and a probable tree throw. Consists of topsoil and subsoil overlying natural geology of silty sand with patches of gravel.					Length (m)	50
					Width (m)	1.8
					Avg. depth (m)	0.32
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
3100	Layer	-	0.22	Topsoil, dark greyish brown sandy silt	-	-
3101	Layer	-	0.10	Subsoil, greyish brown sandy silt	-	-

3102	Layer	-	-	Natural, grey and orangey brown silty sand with patches of gravel	-	-
3103	Tree throw	0.45	0.2	Irregular in plan, irregular sides and base. Single fill	-	-
3104	Fill	0.45	0.2	Fill of 3103. Soft, dark greyish brown sandy silt, some pebbles	-	-
3105	Fill	1.25	0.55	Fill of 3106. Loose, dark brown sandy silt, occasional pebbles	-	-
3106	Ditch	1.25	0.55	N-S linear. Near vertical west side, steep sloping east side, concave base. Single fill	-	-

Trench 32						
General description					Orientation	N-S
Trench contained one probable tree throw. Consists of topsoil and subsoil overlying natural geology of silty sand with gravel patches.					Length (m)	50
					Width (m)	1.8
					Avg. depth (m)	0.34
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
3200	Layer	-	0.22	Topsoil, dark greyish brown sandy silt	-	-
3201	Layer	-	0.12	Subsoil, yellowish brown sandy silt	-	-
3202	Layer	-	-	Natural, orange and grey silty sand with gravel patches	-	-
3203	Tree Throw	0.75	0.16	Irregular in plan. Sloping sides, irregular base	-	-
3204	Fill	0.75	0.16	Fill of 3203. Soft, dark greyish brown sandy silt, moderate pebbles	-	-

Trench 33						
General description					Orientation	N-S
Trench contained three ditches. Consists of topsoil and subsoil overlying natural geology of silty sand. Two extensions excavated to the trench, 3.6m long on the east side and 4.4m long on the west side.					Length (m)	50
					Width (m)	1.8
					Avg. depth (m)	0.43
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
3300	Layer	-	0.21	Topsoil, greyish brown silty clay	-	-
3301	Layer	-	0.22	Subsoil, light grey sandy silt	-	-
3302	Layer	-	-	Natural, orangey brown silty sand	-	-

3303	Fill	0.96	0.25	Fill of 3304. Very compact, light grey silty sand	Pot sherd, bone	-
3304	Ditch	0.96	0.25	E-W linear. Sloping sides, flat base. Single fill	-	-
3305	Fill	0.38	0.12	Fill of 3306. Firm, light grey sandy silt	-	-
3306	Ditch	0.38	0.12	E-W curvilinear. Steep sides, V shaped base. Single fill	-	-
3307	Fill	0.95	0.34	Fill of 3308. Loose, dark brown sandy silt	-	-
3308	Ditch	0.95	0.34	E-W linear. Steep sloping sides, flat base. Single fill	-	-
3309	Layer	-	0.02	Subsoil, compact, light grey sandy silt	-	-

Trench 34						
General description					Orientation	N-S
Trench contained one linear feature. Consists of topsoil and subsoil overlying natural geology of silty sand.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.40
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
3400	Layer	-	0.16	Topsoil, greyish brown silty clay	-	-
3401	Layer	-	0.24	Subsoil, light grey sandy silt	-	-
3402	Layer	-	-	Natural, light greyish orange silty sand	-	-
3403	Fill	1.05	0.2	Fill of 3404. Loose, light grey brown silty sand	-	-
3404	Ditch	1.05	0.2	E-W linear feature. Steep sloping sides, flat base. Single fill	-	-

Trench 35						
General description					Orientation	E-W
Trench contained one ditch with two recuts. Consists of topsoil and subsoil overlying natural geology of sand.					Length (m)	20
					Width (m)	1.8
					Avg. depth (m)	0.45
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
3500	Layer	-	0.20	Topsoil, dark greyish brown silt	-	-
3501	Layer	-	0.25	Subsoil, light grey sandy silt	-	-
3502	Layer	-	-	Natural, light grey and yellow mottled sand	-	-
3503	Ditch	0.4	0.22	NE-SW linear feature. Sloping sides, concave base. Single fill	-	-

3504	Fill	0.4	0.22	Fill of 3503. Friable, light grey mottled with yellowish brown silty sand	-	-
3505	Recut	0.95	0.4	NE-SW linear feature. Steep sloping sides, flat base. Single fill	-	-
3506	Fill	0.95	0.4	Fill of 3505. Soft, dark grey silty sand	-	-
3507	Recut	1	0.36	NE-SW linear feature. Steep sides, flat base, flat based step in eastern side. Single fill	-	-
3508	Fill	1	0.36	Fill of 3507. Friable, light grey with yellowish brown mottling silty sand	-	-

Trench 36						
General description					Orientation	N-S
Trench contained two ditches and a posthole. Consists of topsoil and subsoil overlying natural geology of silty sand.					Length (m)	30
					Width (m)	1.8
					Avg. depth (m)	0.44
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
3600	Layer	-	0.20	Topsoil, dark greyish brown sandy silt	-	-
3601	Layer	-	0.24	Subsoil, yellowish grey sandy silt	-	-
3602	Layer	-	-	Natural, patchy orangey brown and grey silty sand with pebbles	-	-
3603	Ditch	1.66	0.53	NW-SE linear. Sloping sides, flat base. Seven fills	-	-
3604	Fill	1.34	0.2	Fill of 3603. Soft, brownish grey sandy silt, moderate stone inclusions	-	-
3605	Fill	1	0.18	Fill of 3603. Soft, dark greyish brown organic sandy silt, rare small stones and manganese flecks	-	-
3606	Fill	0.8	0.1	Fill of 3603. Fairly soft, lenses of brownish grey sandy silt, blue grey sand and orangey brown clayey silt, some manganese small stones	-	-
3607	Fill	0.54	0.12	Fill of 3603. Soft, light yellowish blue slightly silty sand with orange lenses	-	-

3608	Fill	0.36	0.1	Fill of 3603. Soft, brownish grey sandy silt, with moderate small stones	-	-
3609	Fill	0.5	0.12	Fill of 3603. Soft, brownish grey, sandy silt, frequent orange lenses, rare manganese and small stones	-	-
3610	Fill	0.5	0.12	Fill of 3603. Very soft, light bluish grey sand, with stony pockets	-	-
3611	Posthole	0.28	0.12	Oval shaped in plan, with sloping sides, concave base. Single fill	-	-
3612	Fill	0.28	0.12	Fill of 3611. Compact light grey silty sand, rare manganese and small stones	-	-
3613	Ditch	0.5	0.32	E-W linear. Sloping sides, concave base. Single fill	-	-
3614	Fill	0.5	0.32	Fill of 3613. Compact, light grey silty sand with orangey brown lenses, some manganese and rare small stones	-	-

Trench 37

General description					Orientation	E-W
Trench contained one ditch. Consists of topsoil and subsoil overlying natural geology of silty sand with patches of gravel.					Length (m)	20
					Width (m)	1.8
					Avg. depth (m)	0.50
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
3700	Layer	-	0.20	Topsoil, greyish brown sandy clay	-	-
3701	Layer	-	0.30	Subsoil, mixed light grey and orange sandy silt	-	-
3702	Layer	-	-	Natural, light grey silty sand with patches of gravel	-	-
3703	Fill	1.5	0.26	Fill of 3704. Loose, dark grey silty sand	-	-
3704	Ditch	1.5	0.26	N-S linear. Steep sloping sides, shallowly concave base. One fill	-	-

Trench 38

General description		Orientation	NE-SW
Trench devoid of archaeology. Consists of topsoil and subsoil overlying natural geology of silty sand.		Length (m)	50
		Width (m)	1.8

					Avg. depth (m)	0.40
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date
3800	Layer	-	0.28	Topsoil, dark greyish brown sandy silt	-	-
3801	Layer	-	0.12	Subsoil, yellowish brown sandy silt	-	-
3802	Layer	-	-	Natural, orangey grey silty sand with patches of pebbles	-	-

Trench 39						
General description					Orientation	NE-SW
Trench devoid of archaeology. Consists of topsoil and subsoil overlying natural geology of silty sand with gravel patches.					Length (m)	50
					Width (m)	1.8
					Avg. depth (m)	0.38
Context No.	Type	Width (m)	Depth (m)	Description	Finds	Date

APPENDIX B FINDS REPORTS

B.1 Pottery

By John Cotter

Introduction

B.1.1 A total of 3 sherds of pottery weighing 15g were recovered from three contexts. Given the small quantity present, this has not been separately catalogued but is fully described below. Fabric codes referred to are those of the Museum of London (MoLA 2014).

Description

B.1.2 **Context (2603) Spot-date: c 1720-1780.** Description: 1 sherd (weight 1g). Body sherd in Staffordshire white salt-glazed stoneware (Fabric SWSG). Possibly from the curved neck of a small jug or the wall of a dish/bowl? Fresh condition.

B.1.3 **Context (3303) Spot-date: c 450-800 AD?** Description: 1 sherd (weight 2g). Small abraded body sherd, probably in Anglo-Saxon organic-tempered ware (Fabric code CHAF). Fairly fine black sandy fabric with moderate organic inclusions and a light brown outer surface. If not Anglo-Saxon in date the sherd might be prehistoric(?), unfortunately it is too small to be completely certain.

B.1.4 **Context (3309) Spot-date: c 1600-1800?** Description: 1 sherd (weight 12g). Flanged rim from a dish in post-medieval red earthenware (Fabric PMR). Decayed brown glaze internally. Abraded condition.

Discussion

B.1.5 The pottery comprises ordinary domestic Anglo-Saxon(?) and post-medieval wares typical of the Thames valley area. The possible Anglo-Saxon sherd is the only notable item here and might hint at occupation of this date somewhere in the vicinity.

Recommendations regarding the conservation, discard and retention of material

B.1.6 The pottery here has the potential to inform research through re-analysis - particularly when reviewed alongside other assemblages from the same general area. It is therefore recommended that the pottery be retained.

B.2 Clay Tobacco Pipe

By John Cotter

Description

B.2.1 A single piece of clay pipe weighing 3g was recovered. Given the small amount this has not been separately catalogued but is fully described below.

B.2.2 Context (2603) Spot-date: Late 18th to 19th century? Description: 1 piece of pipe stem (weight 3g). Length 49mm. Fairly slender, with a stem bore diameter of 2.1mm. Slightly burnished. Fresh condition.

Recommendations regarding the conservation, discard and retention of material

B.2.3 The pipe is really only of use for dating and has little potential for further analysis. As it has been adequately recorded it could be discarded if so desired.

B.3 Ceramic building material

By Cynthia Pole

Introduction

B.3.1 A small assemblage of ceramic building material (CBM) amounting to 11 fragments weighing 288g was recovered almost entirely from trench 26, apart from a small scrap from trench 97. The assemblage is summarised in Table B1 below, but a more detailed record has been made on an Excel file which forms part of the archive.

Description

B.3.2 The CBM is entirely of post medieval date and all was made in a similar orange or red fine sandy fabric, with some slight variations in colour and coarseness. In general, most pieces were neat with a regular finish and sharp arrises, which in general points to a later post-medieval date of 18th-19th century. All were hand made, except for a field drain tile made by the extrusion method and suggesting a mid-late 19th or early 20th century date. The roof tile fragments were all quite thick, more often a feature of medieval roof tile. The two thickest fragments might possibly be pantile, but one 15mm thick was certainly a peg tile and it is possible thick peg tiles were the standard type in the region up to the 18th and 19th centuries.

Table B1: Summary of CBM forms and spot dates

Cntxt	Nos	Wt (g)	Spot Date	Form	Comments
2603	1	141	Pmed: C19	Brick	62mm th
2605	1	50	E MOD: M-LC19-EC20	Field drain	Cylindrical; extruded with wire cut end; 82mm dia with bore of 60mm, 11mm th.
2607	1	43	Pmed: C17-C19	Roof: peg	Circular peg hole 16mm dia centred 35mm from edge. 15mm th.
2607	1	17	Pmed: C17-C19	Roof: flat	Slightly lumpy uneven surface
2607	1	7	Pmed: C18-C19	Roof tile	16mm thick.
2609	1	7	Pmed: C18-C19	Roof tile	17mm th
2611	4	21	Pmed: C18-C19	Brick	Broken scraps.
9704	1	2	Pmed	Indet	Single smooth surface.

B.3.3 Discussion

B.3.4 The assemblage is concentrated in one trench, which lies relatively close to the buildings of Woods Farm, some 50m west of the trench. It is probable that the CBM derives from this source relating to casual use of such materials on the farm. The absence in other trenches, suggests it was not being incorporated into the soil as a result of more widespread activity such as manuring.

B.3.5 Recommendations regarding the conservation, discard and retention of material

B.3.6 The CBM has little intrinsic value and has little potential for reanalysis or wider research. The assemblage may be discarded if desired.

APPENDIX C ENVIRONMENTAL REPORTS

C.1 Environmental Samples

By Sharon Cook

Introduction

C.1.1 Three bulk samples were taken during the evaluation at Land South of Wokingham in Berkshire (WOPP19). The samples were all taken primarily for the retrieval of charred plant remains (CPR) and artefacts.

C.1.2 Sample 1 was taken from the single fill of ditch 3304 in trench 33 which contained a sherd of possibly Anglo Saxon or prehistoric pot. Sample 2 is from the fill of undated pit 9405 in trench 94 and sample 3 was from the single fill of ditch undated 9703 in trench 97.

C.1.3 The fills comprised sandy silt loam with frequent gravels.

Method

C.1.4 The bulk samples were processed in their entirety at Oxford Archaeology using a modified Siraf-type water flotation machine. The flot was collected in a 250µm mesh and heavy residues in a 500µm mesh and dried. The residue fractions were sorted by eye while the flot material was sorted using a low power (x10) binocular microscope to extract cereal grains and chaff, smaller seeds and other quantifiable remains. The flots were all 100% scanned with the exception of sample 2 of which 100ml only was scanned due to its large size.

Results

C.1.5 Table C1 gives full details of the sample lists and the charred taxa identified from them.

C.1.6 The flots are all of a generally good size containing moderate quantities of fine uncharred roots and occasional uncharred seeds which appear to be modern. However, with the exception of sample 1 contain no charred material within the scanned portion other than charcoal.

C.1.7 All three flots contain charcoal with external mineral encrustation with that from samples 1 and 3 being extremely heavily encrusted while mineralisation is less pronounced in sample 2.

C.1.8 Fungal sclerotia are abundant within samples 1 and 3 and small quantities are also present within sample 2. This together with the mineral encrustation is likely to be a result of damp conditions although there is no evidence of waterlogging.

C.1.9 A small quantity of burnt flint was retrieved from the residues of samples 1 and 2.

Conclusion

C.1.10 The majority of material present within the flots is charcoal with a highly mineralised appearance. This level of mineral precipitate makes further identification difficult due to the encrustation and filling of pores and vessels.

C.1.11 The lack of evidence for agriculture in the form of seeds and cereals means that the potential for interpretation is very low. The lack of charred plant remains other than charcoal may be a reflection of the types and location of sampled features in relation to any settlement activity.

C.1.12 Charred plant remains are clearly preserved on this site but at least in the sampled areas the potential of the remains to provide useful information is compromised by mineral encrustation. Bearing in mind the results of this evaluation, sampling during any further phases of work should be in accordance with the most recent sampling guidelines (e.g Historic England 2011).

Table C1: The Charred Plant Remains

Sample no.	Context no.	Area/Trench	Feature/Deposit	Date	Sample vol. (L)	Flot vol. (ml)	Charcoal >2mm	Grain	Chaff	Weeds	Molluscs	Other	Notes
1	3303	33	Single Fill of Ditch 3304		40	100	100+			*			Charcoal hard and heavily mineral encrusted, largely ring porous, some roundwood. Occasion uncharred seeds. Rich in fungal sclerotia. Single badly damaged oat/brome. Fragment of <i>Veronica hederifolia</i> .
2	9406	94	? Fill of Pit 9405		23	600	500+						Charcoal mineral encrusted although not to the same extent as sample 2. Occasional fungal sclerotia.
3	9704	97	Single Fill of Ditch 9703		23	100	25+						Volume almost entirely fine roots. Charcoal similar to sample 1 but smaller size and quantity. Occasional uncharred seeds. Extremely rich in fungal sclerotia (1000+)

APPENDIX E SITE SUMMARY DETAILS / OASIS REPORT FORM

Site name: Land South of Wokingham
Site code: WOPP19
Grid Reference SU 82660 67717
Type: Evaluation
Date and duration: 19/8/19-30/10/19
Location of archive: The archive is currently held at Oxford Archaeology, Janus House, Osney Mead, Oxford OX2 0ES, and will be deposited with Reading Museum in due course, under the following accession number: TBC.

Summary of Results: In August and September 2019 Oxford Archaeology was commissioned by Pegasus Group on behalf of Kingacre Estates Ltd to carry out a trial trench archaeological evaluation of the site of a proposed urban extension to the south of Wokingham. Previous archaeological work in the general area had revealed low level and dispersed evidence of prehistoric, Roman and post-medieval agricultural activity.

The evaluation confirmed the results of previous archaeological investigations in the locality, revealing infilled field boundaries or an absence of archaeological features across much of the site. There were two exceptions to this trend. Trenches 33, 35 and 36 contained a number of ditches on different alignments to the surrounding field systems, but produced no finds and remain undated. Trenches 94, 97, 98, 101 and 102 contained a dispersed mix of ditches, pits and postholes indicating the presence of low-density settlement activity.
